4.1 L1 Product Format C	Check		
Each product, retrieved and unpack	ed from the science server, is checked to	ensure it consists of both an XML header	file (.HDR) and a product file (.DBL).
Number of products with errors:	0		
4.2 L1B Product Header	Analysis		
For all products, a sories of prodofi	ned checks are carried out on the MDH ar	ad SDH in order to identify any inconsisten	cies and/or errors raised by the ground-segment processing chain.
Number of products with errors:			and of chois related by the ground-acgment processing chain.
4.3 L1B Auxilary Data Fi	le Usage Check		
Each product is checked for missing	Data Set Descriptors wrt a pre-determine	ed baseline and also to check the validity o	f Auxiliary Data Files is correct.
Number of products with errors:	0		
4.4 L1B Flagged Auxiliar	ry Correction Error Check		
Each product is checked to spot au	kiliary corrections flagged by the ground-st	tation processing chain as missing or conta	aining errors

5.5 L2 Measurement Quality Flag Check

CryoSat L2 data includes a quality flag word (field 43) for each 20-Hz measurement record. The bit value of this flag is an assessment of the measurement quality by the ground-segment processing chains

Presently, there are several common data Quality Flag errors raised by the Level 2 products which are either expected due to changes made to the IPF processor in Baseline B or else are due to known issues with the data processors. The investigation of the known issues are on-going and are due to be resolved with the next update of the Level 2 processors. All common known issues are summarised in the list below, followed by a table highlighting any additional issues which may arise from this test.

Freeboard Error: This Quality Flag is correctly set in all products as this parameter is currently not provided in the L2 products and the Freeboard value is presently set to the default value of -9999.

SARin x-track angle error: Currently there is an on-going investigation into the high number of errors from the 'SARIn x-track Error' Quality Flag over Antarctica.

3

Height error and Backscatter error: It has been noted that the number of errors arising from the 'Backscatter Error' and 'Height Error' Quality Flag is much higher than expected over land areas and this is currently part of an on-going investigation by expert teams.

6. QCC Check

The QCC is a CryoSat facility that performs a primary survey of data products immediately after production by the PDS and LTA processing facilities. A list of the tests which raised errors or warnings is provided below.

Nb. There is currently a discrepancy between the number of QCC reports and the number of products reported. This is a known issue and investigation is on-going.
