3. Instrument Configuration									
The SIRAL instrument configuration	for the day of acquisition is provided below.								
SIRAL instrument(s) in use	SIRAL - A								
Star Tracker(s) in use:	tar Tracker(s) in use: Star Tracker 1 & 2								
4. Level 1B Data Quality Check									
4.1 L1 Product Format Check									
Each product, retrieved and unpacked from the science server, is checked to ensure it consists of both an XML header file (.HDR) and a product file (.DBL). Number of products with errors: 0									
4.2 L1B Product Header Analysis									
For all products, a series of pre-defined checks are carried out on the MPH and SPH in order to identify any inconsistencies and/or errors raised by the ground-segment processing chain.									
Number of products with errors: 0									
4.3 L1B Auxilary Data File Usage Check									
Each product is checked for missing Data Set Descriptors wrt a pre-determined baseline and also to check the validity of Auxiliary Data Files is correct.									
Number of products with errors: 0									
4.4 L1B Flagged Auxiliary Correction Error Check									
Each product is checked to spot auxiliary corrections flagged by the ground-station processing chain as missing or containing errors									
Number of products with errors:	3								
Product CS_OFFL_SIR_LRM_1B_20130311T054535_20130311T060020_B001			Test Failed Dynamic atmosphere correction error

CS_OFFL_SIR_LRM_220130311T174917_20130311T180450_B001			Dynamic atmosphere correction error						

5.5 L2 Measurement Quality Flag Check

CryoSat L2 data includes a quality flag word (field 43) for each 20-Hz measurement record. The bit value of this flag is an assessment of the measurement quality by the ground-segment processing chains

Presently, there are several common data Quality Flag errors raised by the Level 2 products which are either expected due to changes made to the IPF processor in Baseline B or else are due to known issues with the data processors. The investigation of the known issues are on-going and are due to be resolved with the next update of the Level 2 processors. All common known issues are summarised in the list below, followed by a table highlighting any additional issues which may arise from this test.

Freeboard Error: This Quality Flag is correctly set in all products as this parameter is currently not provided in the L2 products and the Freeboard value is presently set to the default value of - 9999.

SARin x-track angle error: Currently there is an on-going investigation into the high number of errors from the 'SARIn x-track Error' Quality Flag over Antarctica.

0

0

15

Height error and Backscatter error: It has been noted that the number of errors arising from the 'Backscatter Error' and 'Height Error' Quality Flag is much higher than expected over land areas and this is currently part of an on-going investigation by expert teams.

Number of products with errors:

6. QCC Check

The QCC is a CryoSat facility that performs a primary survey of data products immediately after production by the PDS and LTA processing facilities. A list of the tests which raised errors or warnings is provided below.

Nb. There is currently a discrepancy between the number of QCC reports and the number of products reported. This is a known issue and investigation is on-going.

Product type	Nb. Products	Nb. QCC Reports	Nb. Valid	Nb. Warnings	Nb. Errors
SIR_GDR_2A	17	15	0	15	0
SIR_LRM_1B	142	141	141	0	0
SIR_LRM_2	141	140	1	139	0
SIR_SAR_1B	158	158	0	158	0
SIR_SAR_2A	108	108	5	103	0
SIR_SIN_1B	107	107	0	107	0
SIR_SIN_2	103	103	0	103	0

6.1 QCC Errors

Number of products with QCC errors:

6.2 Missing QCC Reports

Number of products with missing QCC reports:
