|---|---|--|
| Each product, retrieved and unpacked from the science server, is checked  | ed to ensure it consists of both an XML he    | ader file (.HDR) and a product file (.DBL).  |
| Number of products with errors: 0   |   |  |
| 4.2 L1B Product Header Analysis   |   |  |
| For all products, a series of pre-defined checks are carried out on the MF  | PH and SPH in order to identify any incons    | istencies and/or errors raised by the ground-segment processing chain.                                   |
| Number of products with errors: 3   |   |  |

| 4.3 Star Tracker Usage Check  |   |  |
| Each product is checked in order to ensure a valid star tracker file has be   | een used in processing.                       |  |
| Number of products with errors: 0   |   |  |
| 4.4 L1B Calibration Usage Check   |   |  |
| Each product is checked in order to ensure that the necessary calibration   | n files have been used in processing.         |  |
| Number of products with errors: 0   |   |  |
| 4.5 L1B Auxilary Data File Usage Check  |   |  |
| Each product is checked for missing Data Set Descriptors with respect to  | o a pre-determined baseline and also to ch    | eck the validity of Auxiliary Data Files is correct.   |
| Number of products with errors: 0   |   |  |
| 4.6 L1B Auxiliary Correction Error Check  |   |  |
| CryoSat L1B data includes a correction error flag (field 54) for each measured  | surement record. The bit value of this flag   | ndicates any problems when set.  |
| Number of products with errors: 0   |   |  |
| 4.7 L1B Measurement Confidence Data Check   |   |  |
| CryoSat L1B data includes a measurement confidence flag (field 18) for a  | each measurement record. The bit value o      | f this flag indicates any problems when set.   |
| Currently, there are several common error flags raised in the Level below, followed by a table of any additional issues arising from this |   | operational mode or surface type. All common flags are summarised in the list                            |
| Block Degraded Flag: This flag is currently set for a number of individual  | al records generally at the start or end of p | roducts (all modes), but this is to be expected.   |
| Phase Perturbation Flag: This flag is currently set for all L1B SARIn pro   | oducts, indicating that the ADC correction    | application is deactivated, but this is in line with the current configuration.                          |
| Number of products with errors: 2   |   |  |
| Product   | Test Failed                                   | Description  |

|   | 5. Level 2 Data Quality                       | Check  |
| 5.1 L2 Product Format Check   |   |  |
| Each product, retrieved and unpacked from the science server, is checked  | ed to ensure it consists of both an XML be    | ader file ( HDR) and a product file ( DBL ).   |
| Number of products with errors: 0   |   | ······································   |
| 5.2 L2 Product Header Analysis  |   |  |
| For all products, a series of pre-defined checks are carried out on the MF  | PH and SPH in order to identify any incons    | istencies and/or errors raised by the ground-segment processing chain.                                   |

Number of products with errors: 1

Product CS\_OFFL\_SIR\_SAR\_1B\_20180124T183449\_20180124T183451\_C001

Percentage of processing errors detected greater than minimum acceptable threshold.

#### 5.3 L2 Auxiliary Data File Usage Check

Each product is checked for missing Data Set Descriptors with respect to a pre-determined baseline and also to check the validity of Auxiliary Data Files is correct. Number of products with errors: 0

## 5.4 L2 Auxiliary Correction Error Check

CryoSat L2 data includes a correction error flag (field 30) for each measurement record. The bit value of this flag indicates any problems when set.

Number of products with errors:

#### 5.5 L2 Measurement Quality Flag Check

CryoSat L2 data includes a quality flag (field 50) for each 20-Hz measurement record. The bit value of this flag indicates any problems when set.

Currently, there are several common error flags raised in the Level 2 products which are expected due to operational mode or surface type. All common flags are summarised in the list below, followed by a table of any additional issues arising from this test.

Test Failed

Freeboard error: This flag is correctly set in all L2 SAR products that are not discriminated as sea-ice, and for which freeboard cannot be calculated.

Height and Backscatter errors: These flags are currently set for products over land, but this is to be expected. Retracker 1 Height and Backscatter error flags are also set for products over sea-ice, but this is to be expected.

## Peakiness error: This flag is currently set for products over sea-ice, but this is to be expected.

SARIN X-Track Angle Error: This flag is set when the difference between the computed surface elevation and the DEM is >50 m. The DEM is only available over Greenland and Antarctica and as a result this flag is set for L2 SARIn products in all other locations as expected.

SSHA interpolation error: This flag is currently set for a number of SAR products occurring at surface type boundaries, but this is to be expected.
