1 - Introduction

This report is based on the analysis of wave mode level-1 cross spectra (ASA_WVS_1P) products, which are the available few hours after the acquisition, on the high rate browse (BP) products and on the Module Stepping (MS) product.

2 - Summary

2.1 - Instrument Unavailability

Planned Instrument Unavailabilities due to OCM manoeuvre from 04-Feb-2004 02:40:00 to 04-Feb-2004 08:01:00

2.2 - Browse Visual Inspection

No anomalies observed on available browse products.

2.3 - Data Analysis

-Stable wave internal calibration pulses gain and phase.
-Stable raw data statistics.

-Nominal Doppler behavior.

3 - Module Stepping Mode

The MS mode provides an internal health check on an individual module basis.

The purpose of this mode is to identify any malfunctionning modules and to identify modules for which calibration offsets are to be applied.

No MS products available since 02-Feb-2004.

☒

5.3 - Gain imbalance I/Q

☒

6 - Wave Doppler Analysis

Discontinuities are visible in the doppler evolution versus ANX, probably due to the occurred OCM manoeuvre.
Doppler analysis performed over the last 35 days.

6.1 - Unbiased Doppler Error

Evolution of unbiased Doppler error (Real - Expected)
