## 1 - Introduction

This report is based on the analysis of wave mode level-1 cross spectra (ASA\_WVS\_1P) products, which are the available few hours after the acquisition, on the high rate browse (BP) products and on the Module Stepping (MS) product.

## 2 - Summary

### 2.1 - Instrument Unavailability

ASAR unavailable from 09 Feb 2004 03:27:37 to 09 Feb 2004 13:13:07.

### 2.2 - Browse Visual Inspection

No anomalies observed on available browse products.

### 2.3 - Data Analysis

-Stable wave internal calibration pulses gain and phase.  
-Stable raw data statistics.

-Nominal Doppler behavior.

## 3 - Module Stepping Mode

The MS mode provides an internal health check on an individual module basis.  
 The purpose of this mode is to identify any malfunctionning modules and  
 to identify modules for which calibration offsets are to be applied.  
 No anomalies observed on last available MS products (08 Feb 2004).

### 6.3 - Doppler evolution versus ANX

Evolution Doppler error versus ANX
☒

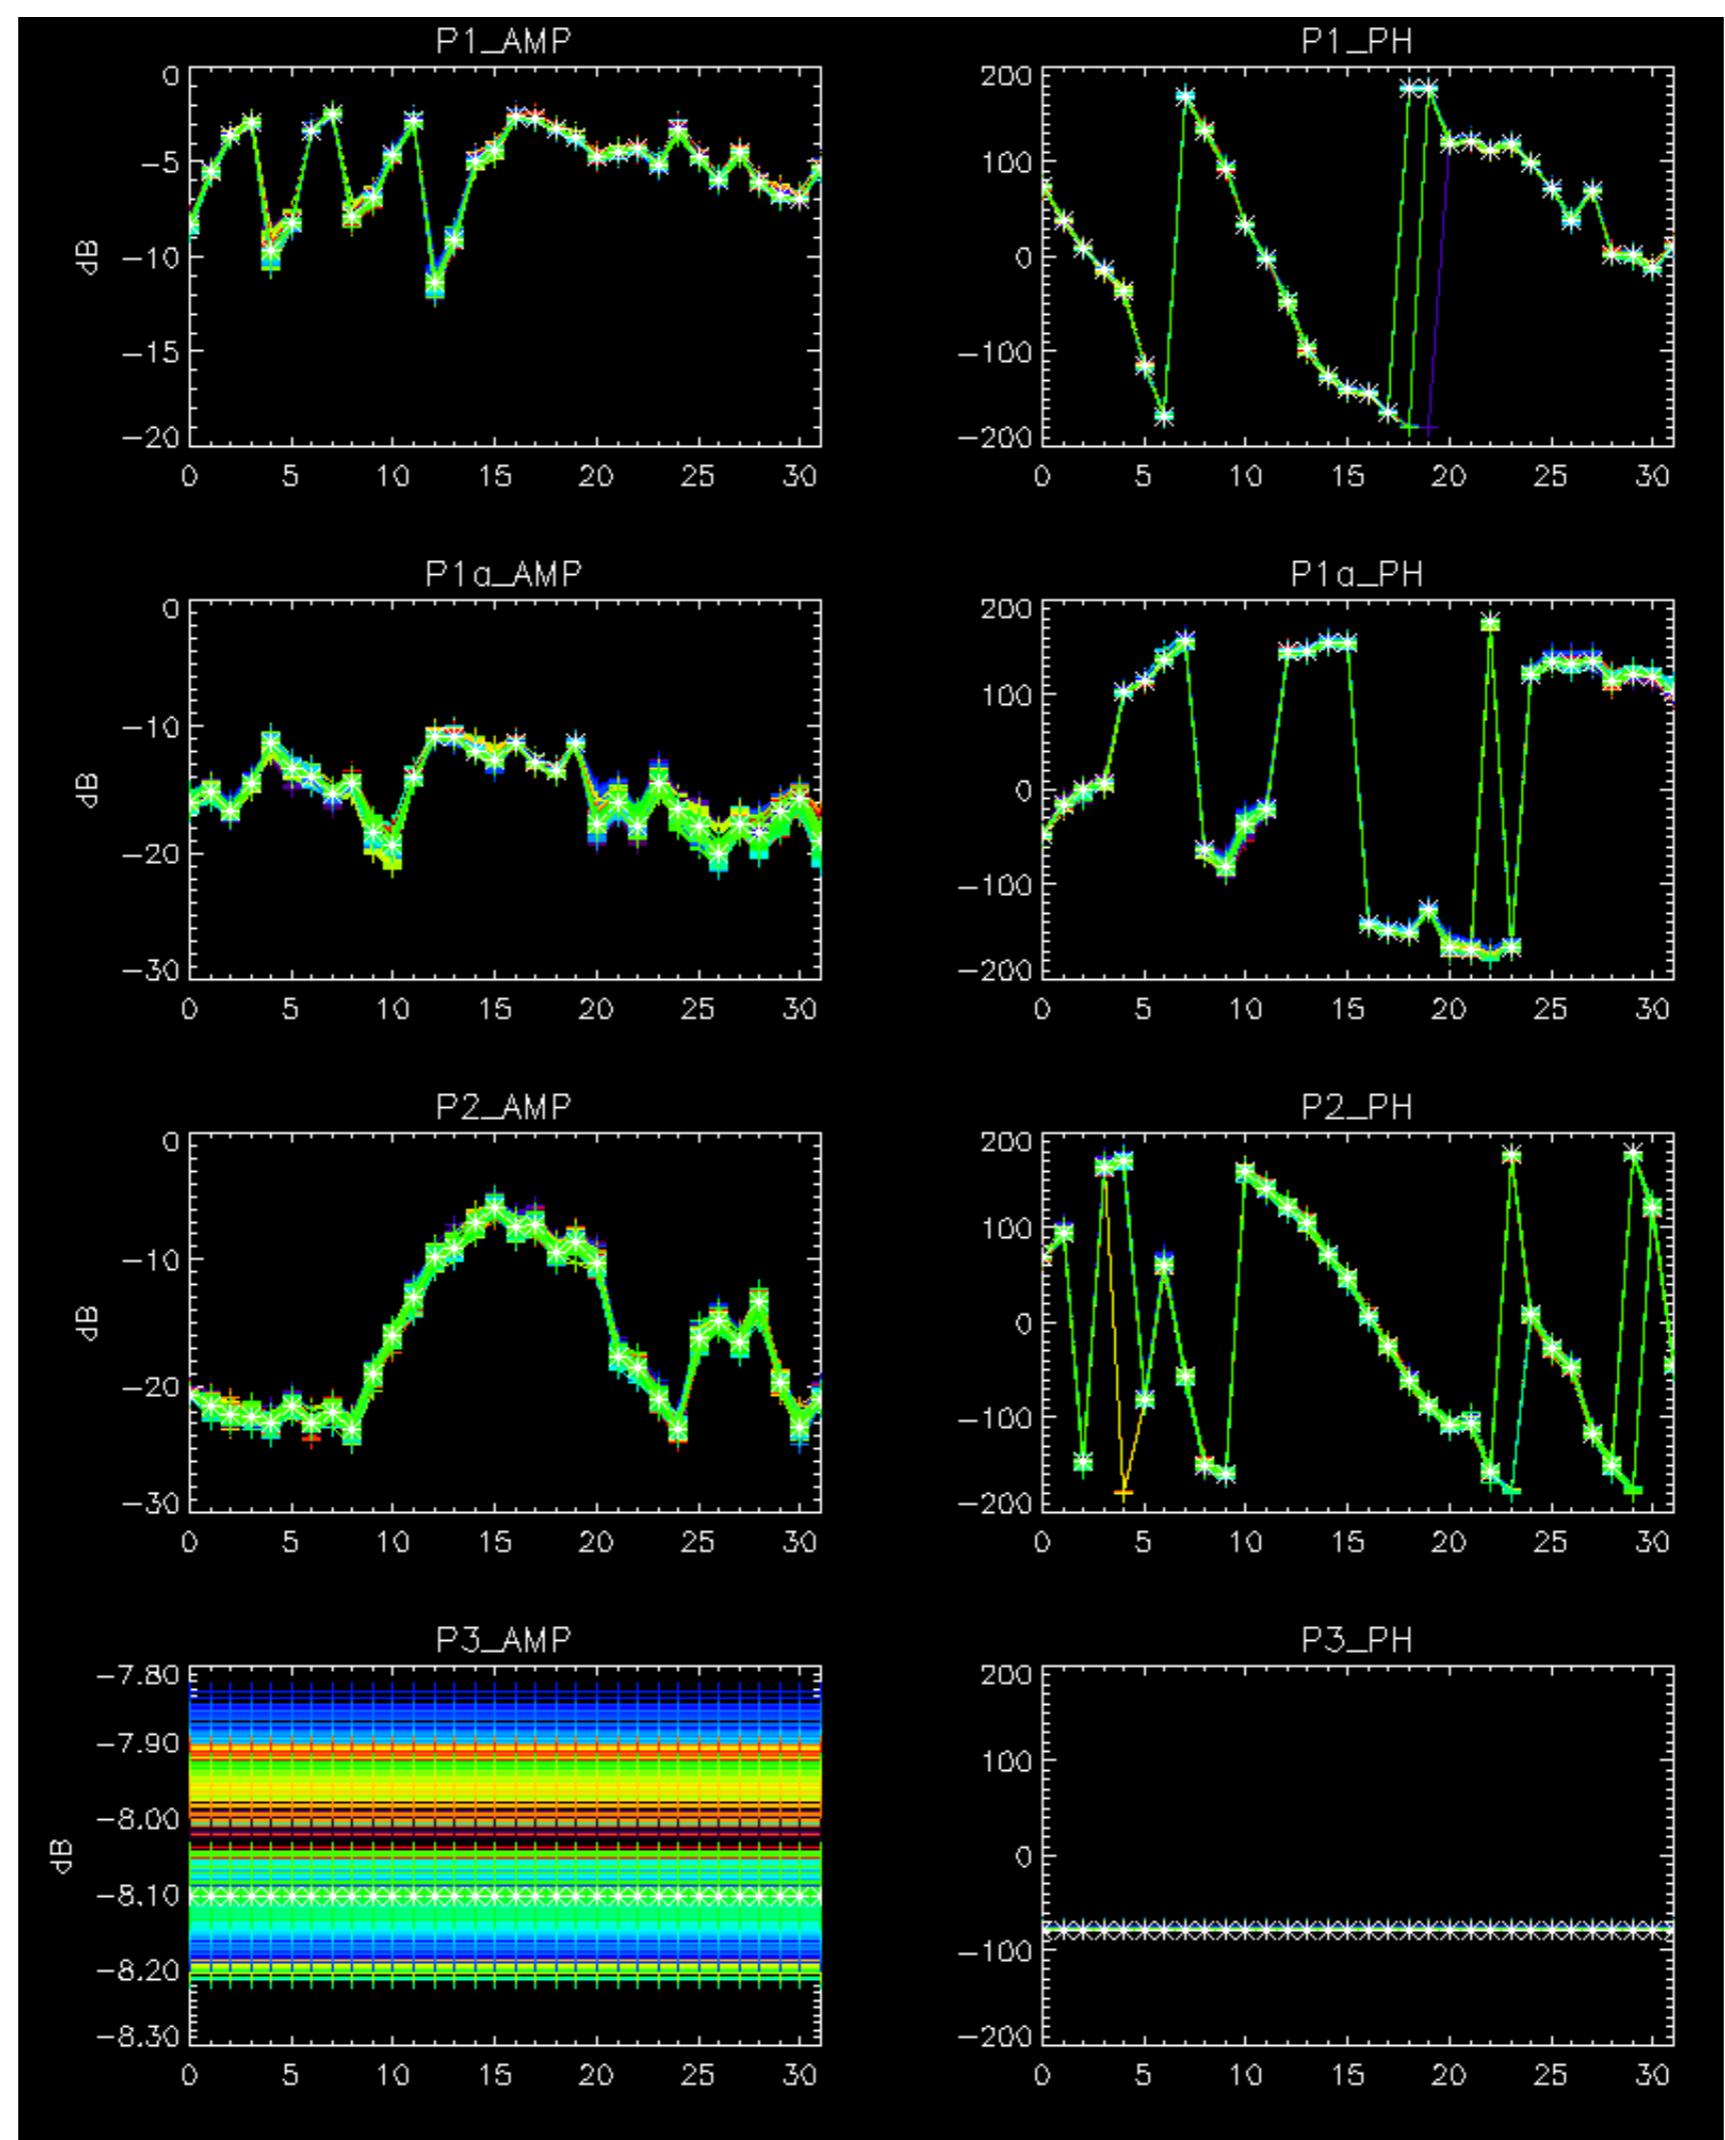

No anomalies observed on available browse products.

No anomalies observed.

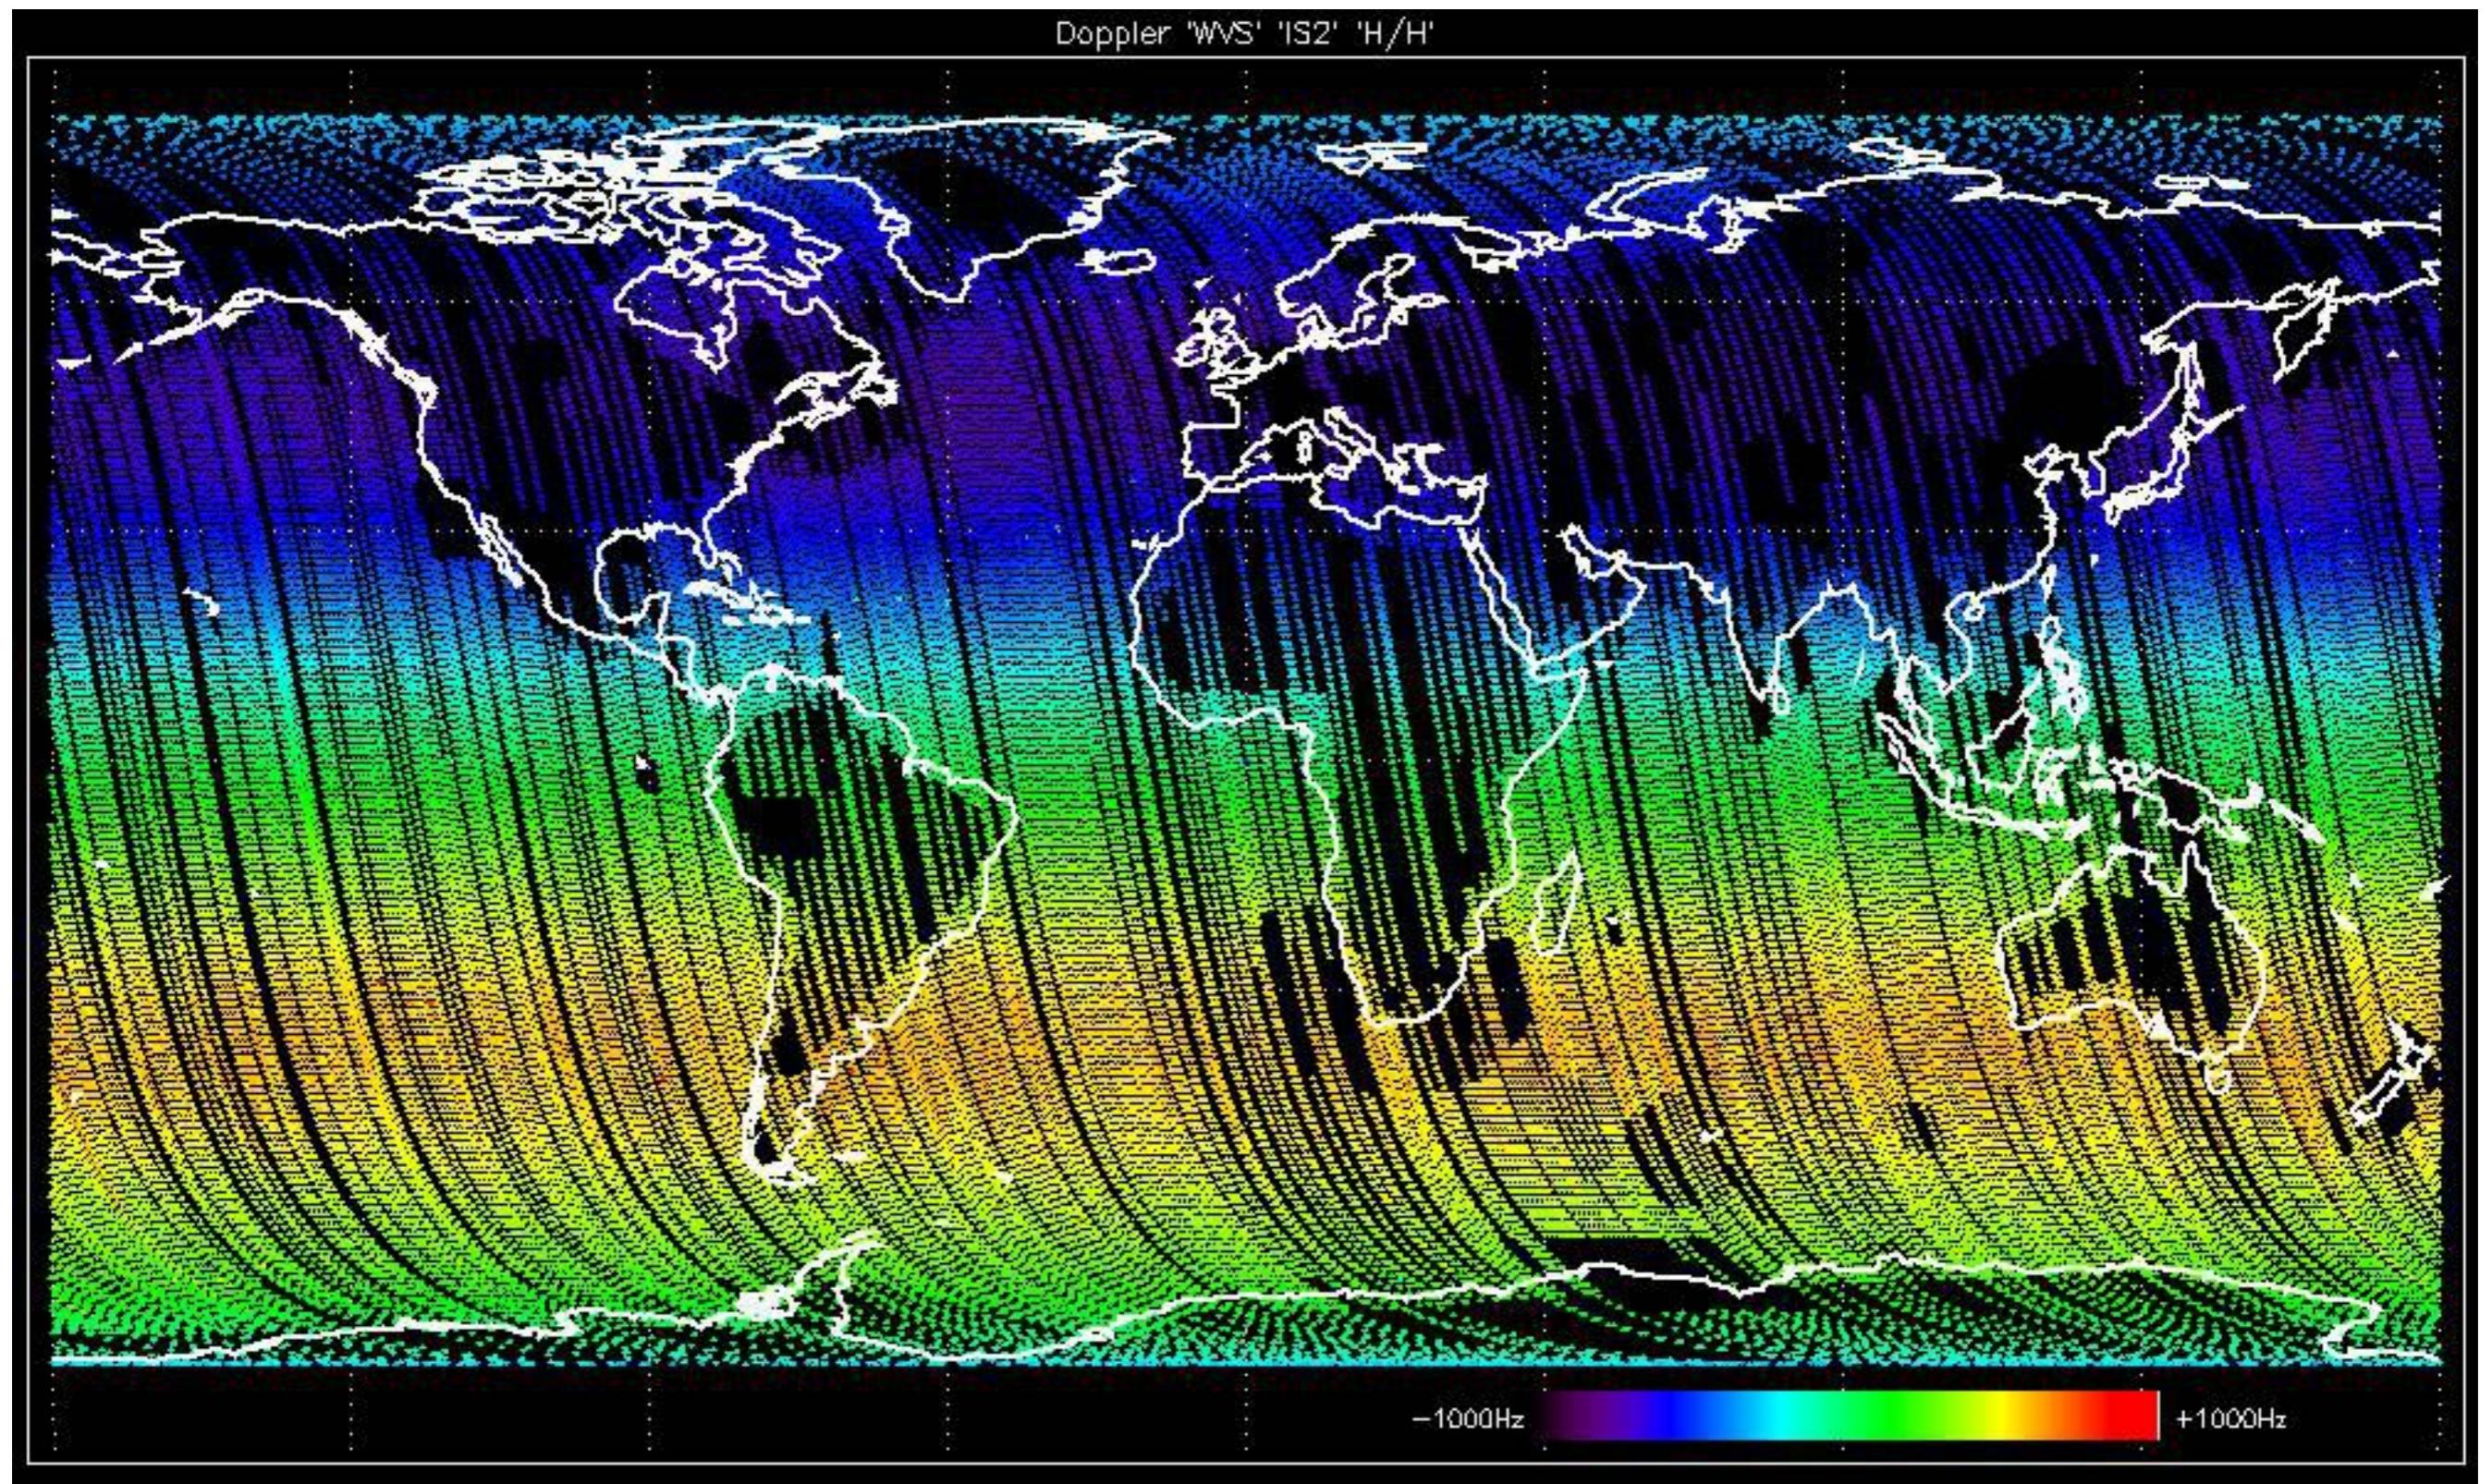

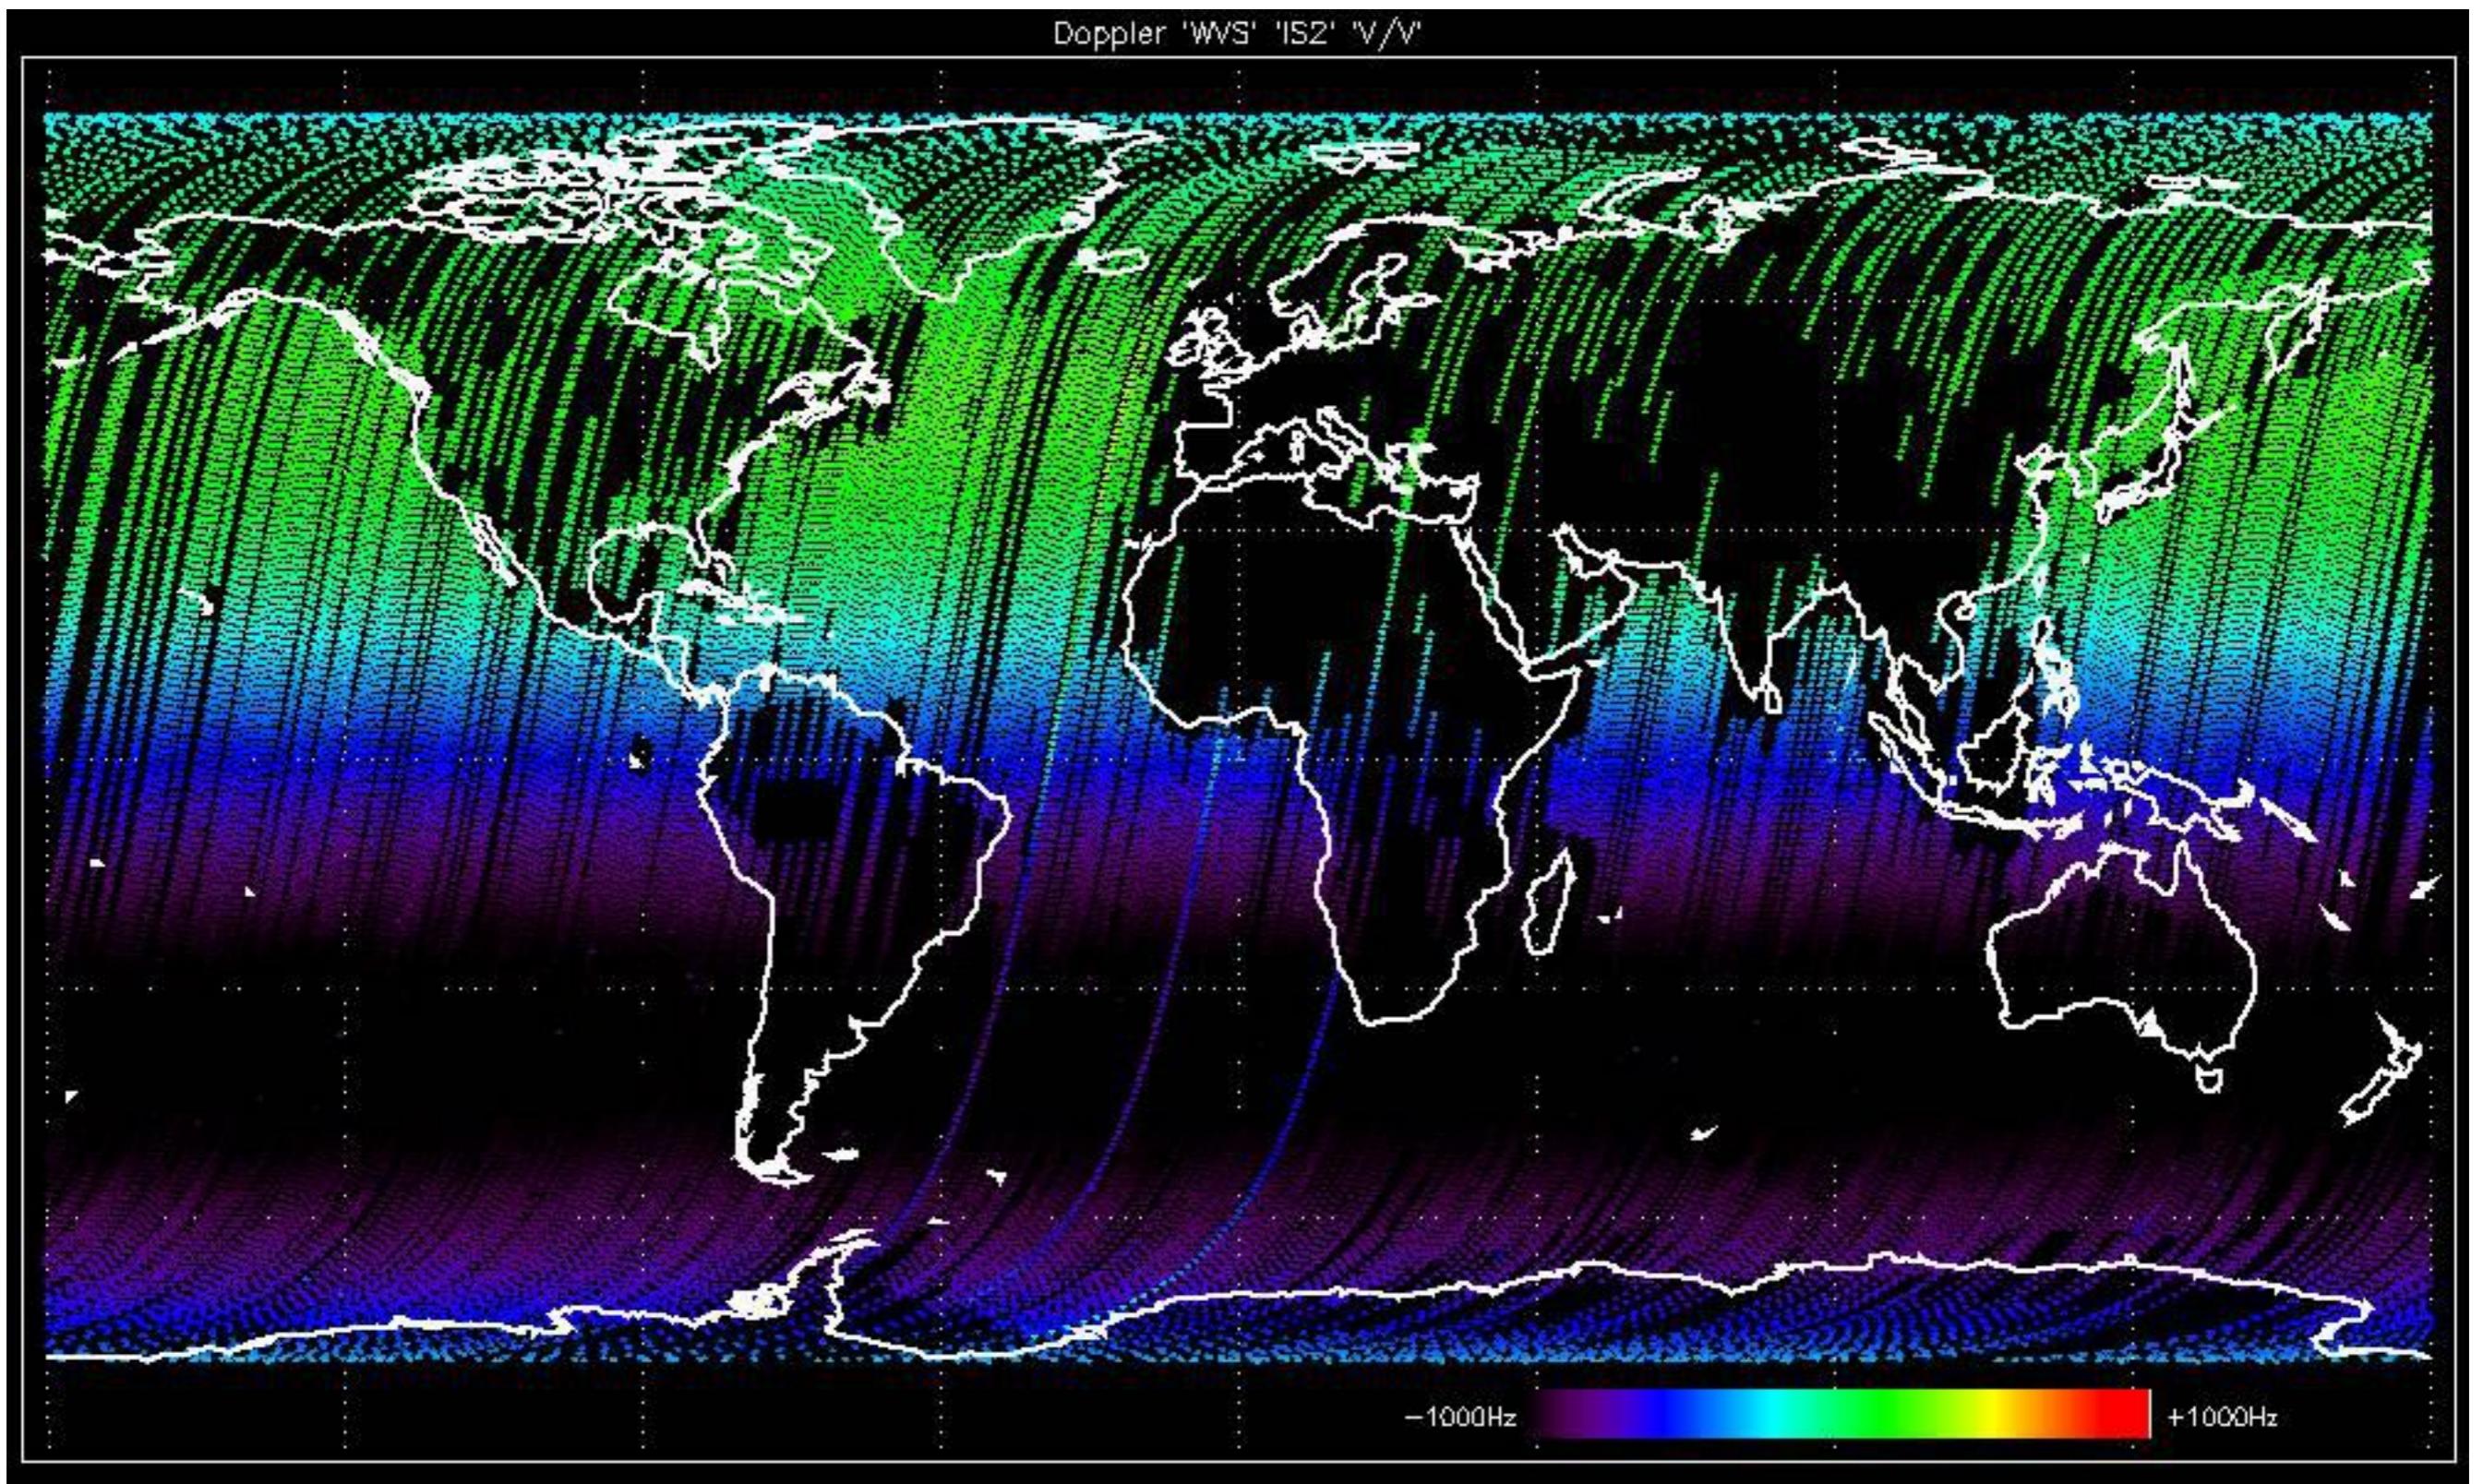

- Stable wave internal calibration pulses gain and phase.
- Stable raw data statistics.
- Nominal Doppler behavior.

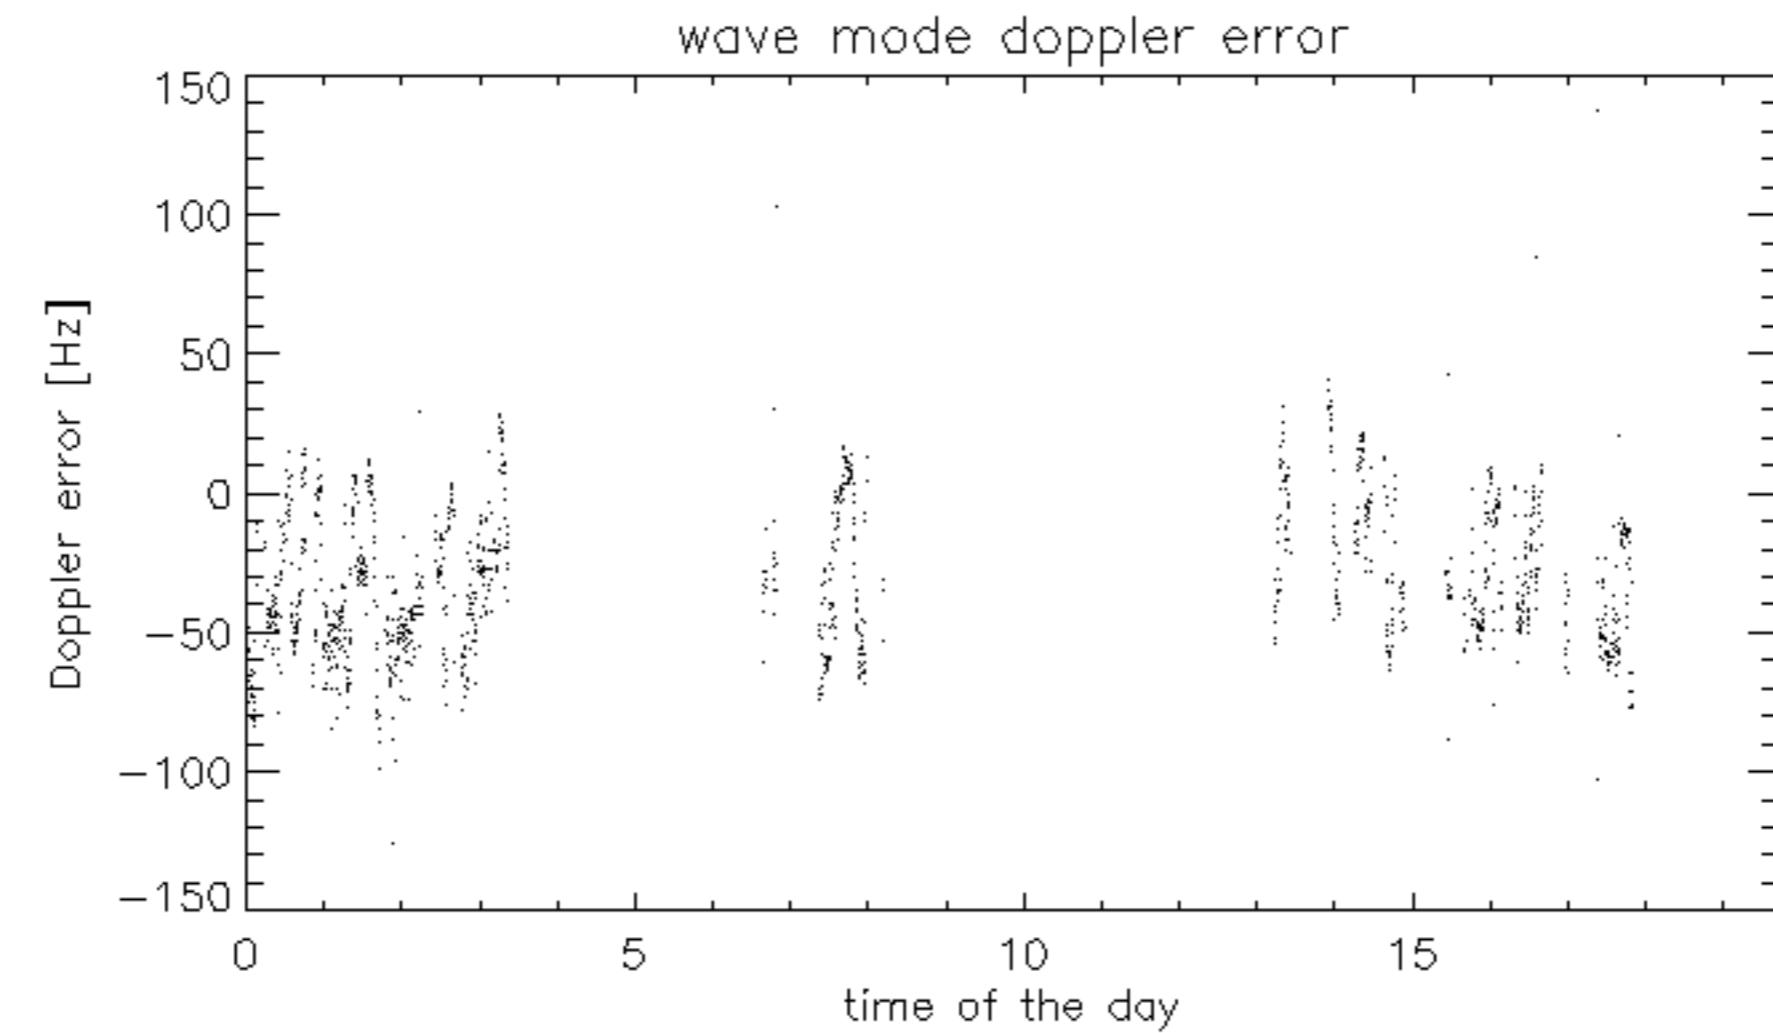

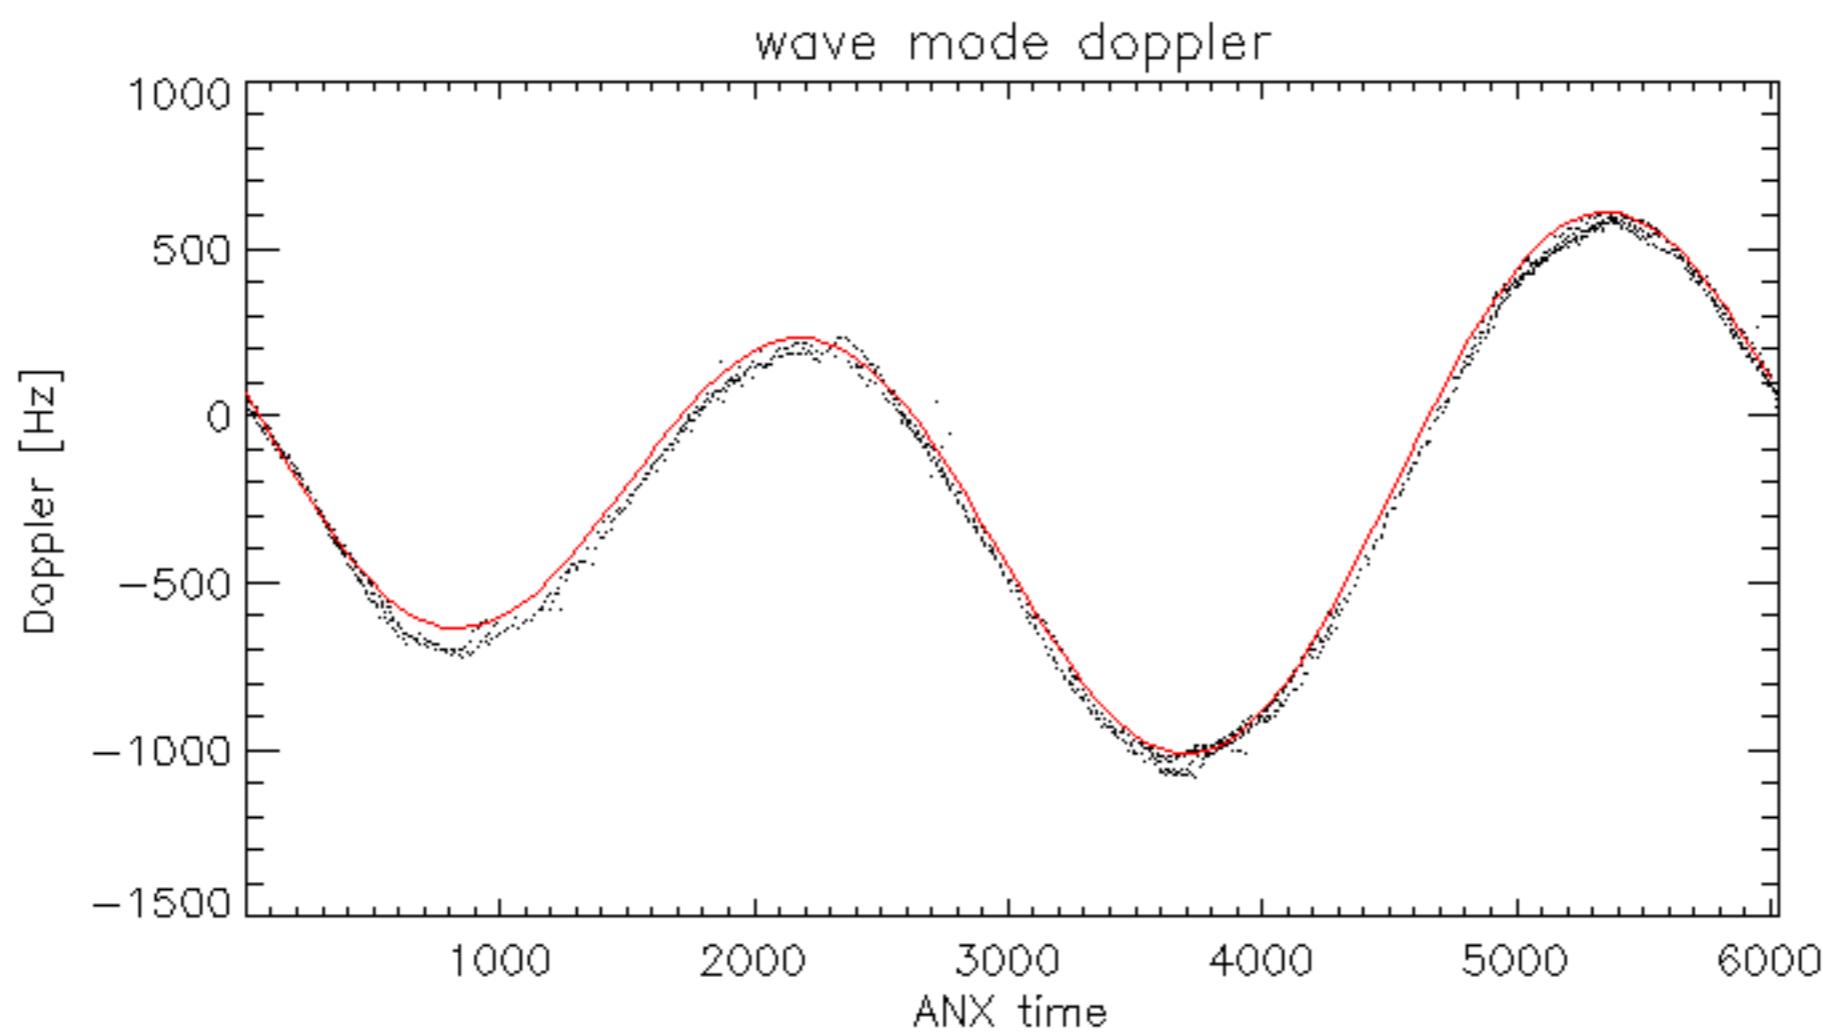

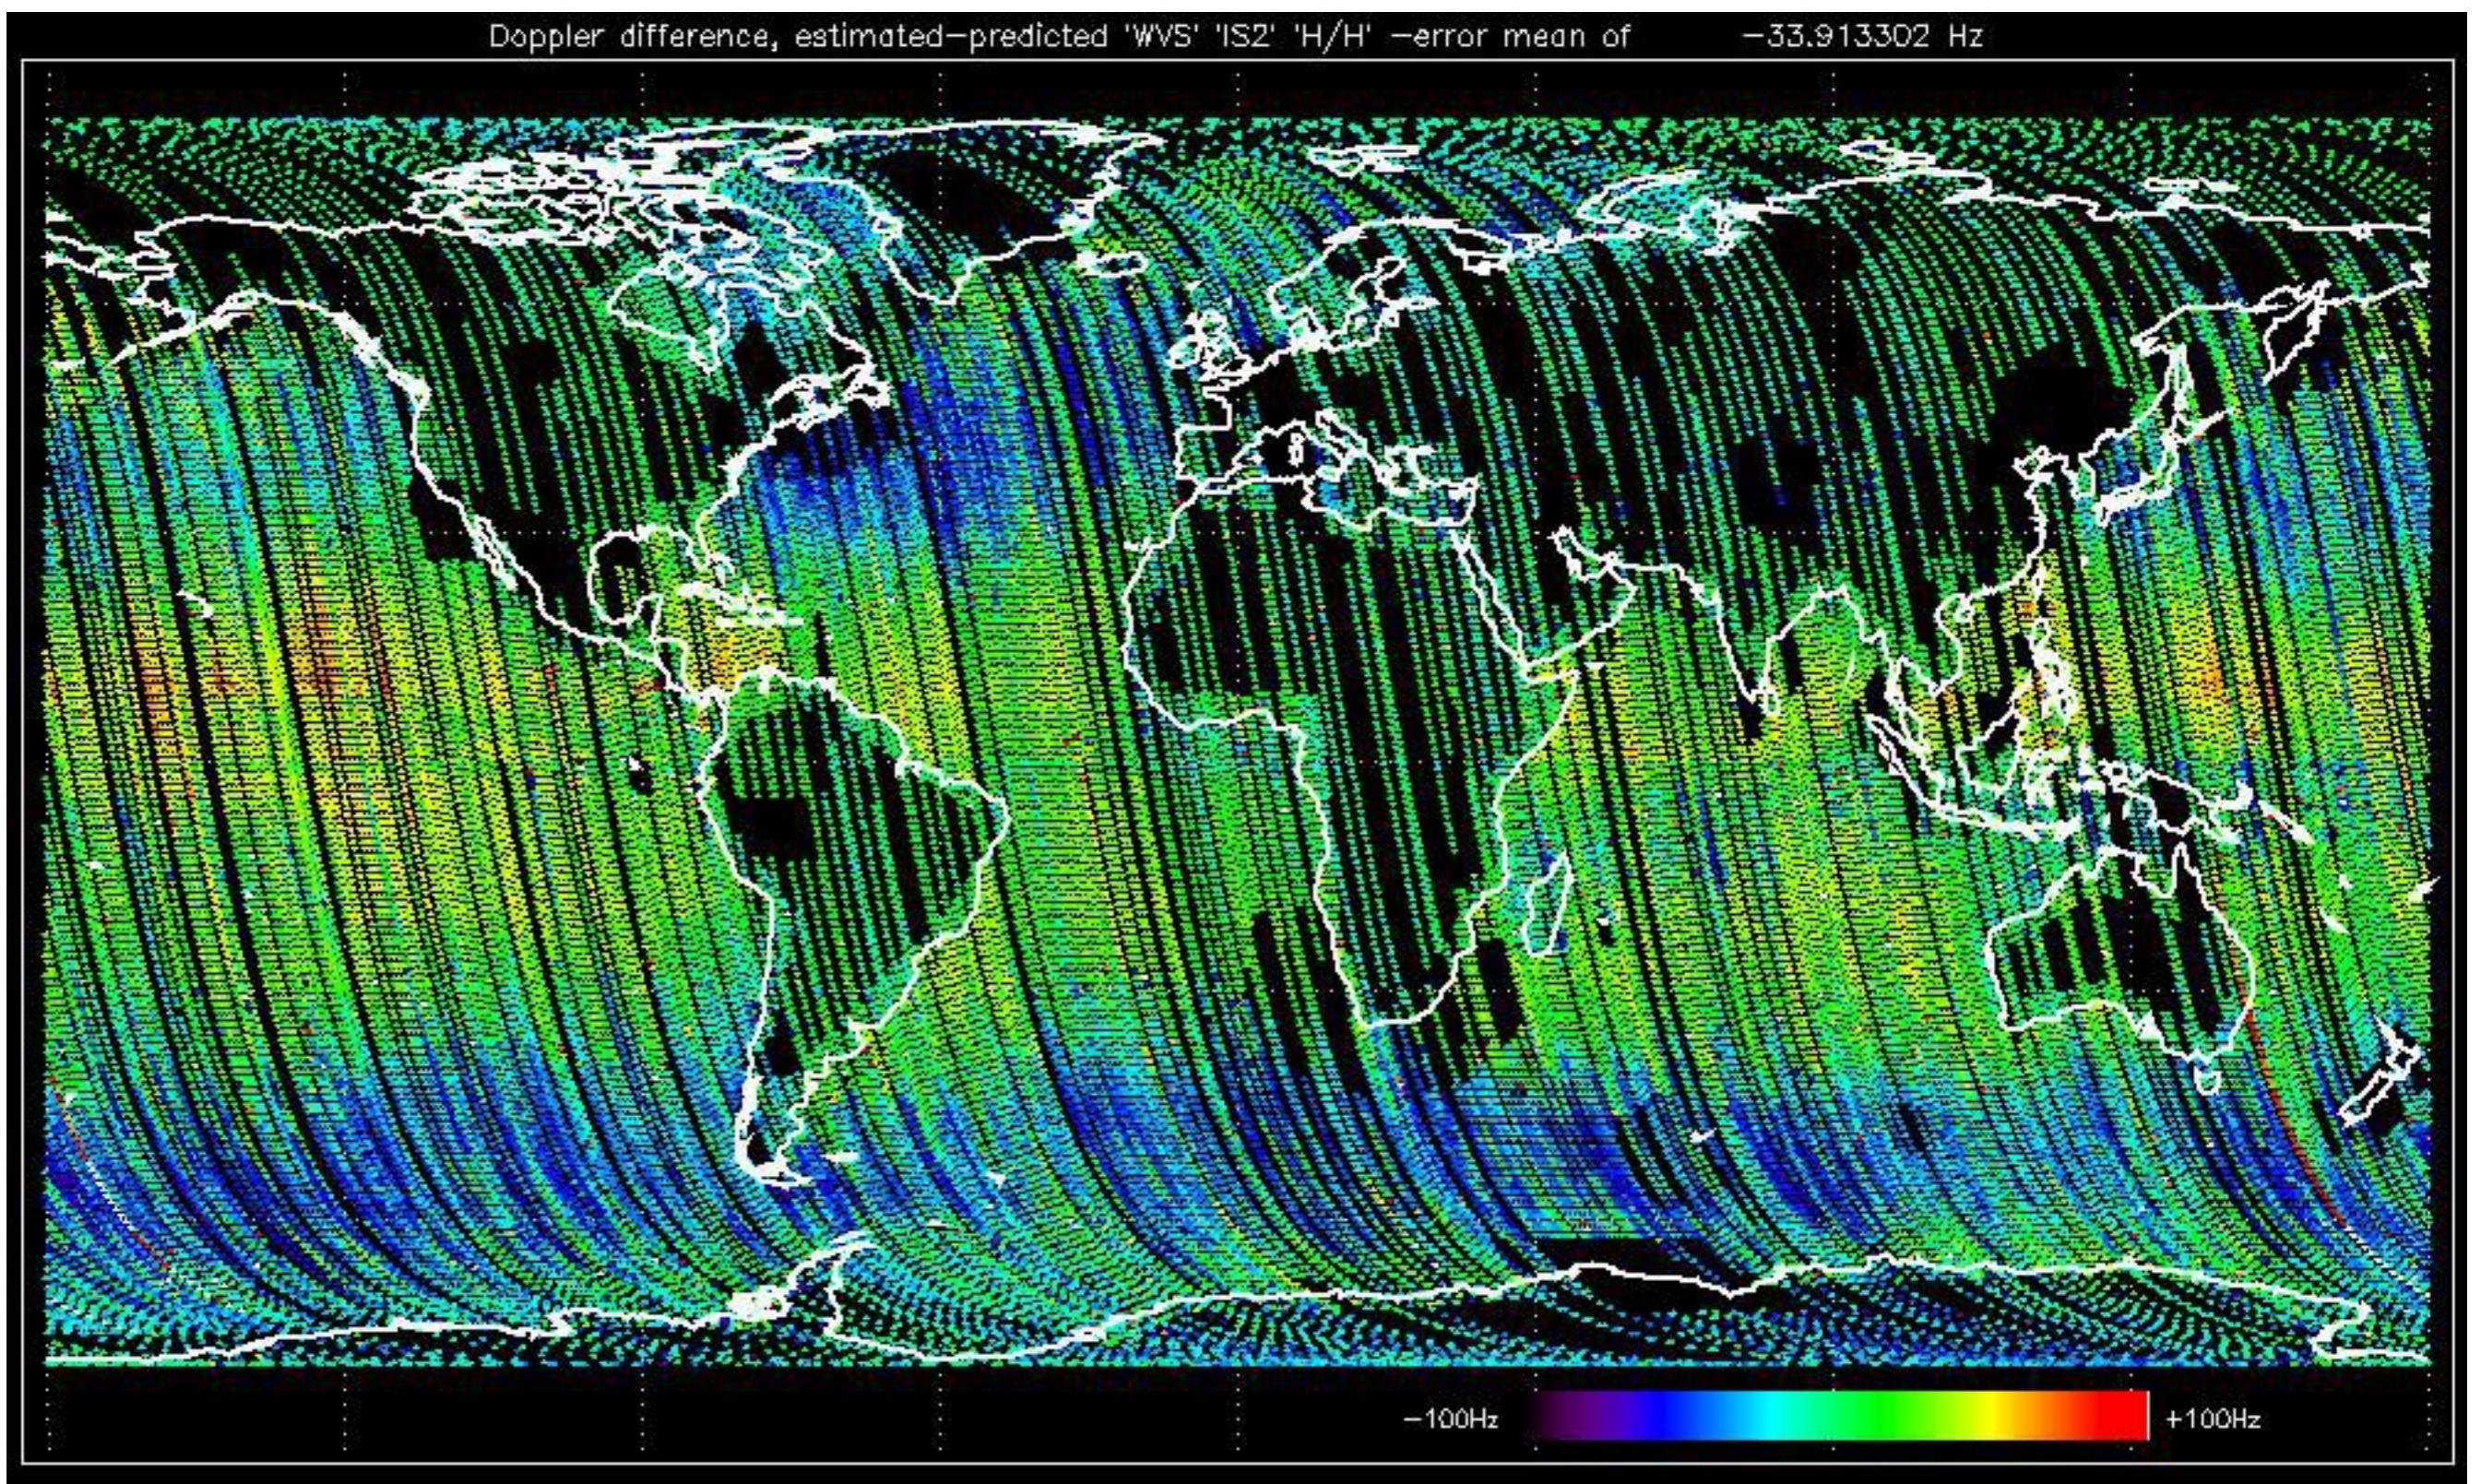

No anomalies observed in Doppler evolution.  
Doppler analysis performed over the last 35 days.

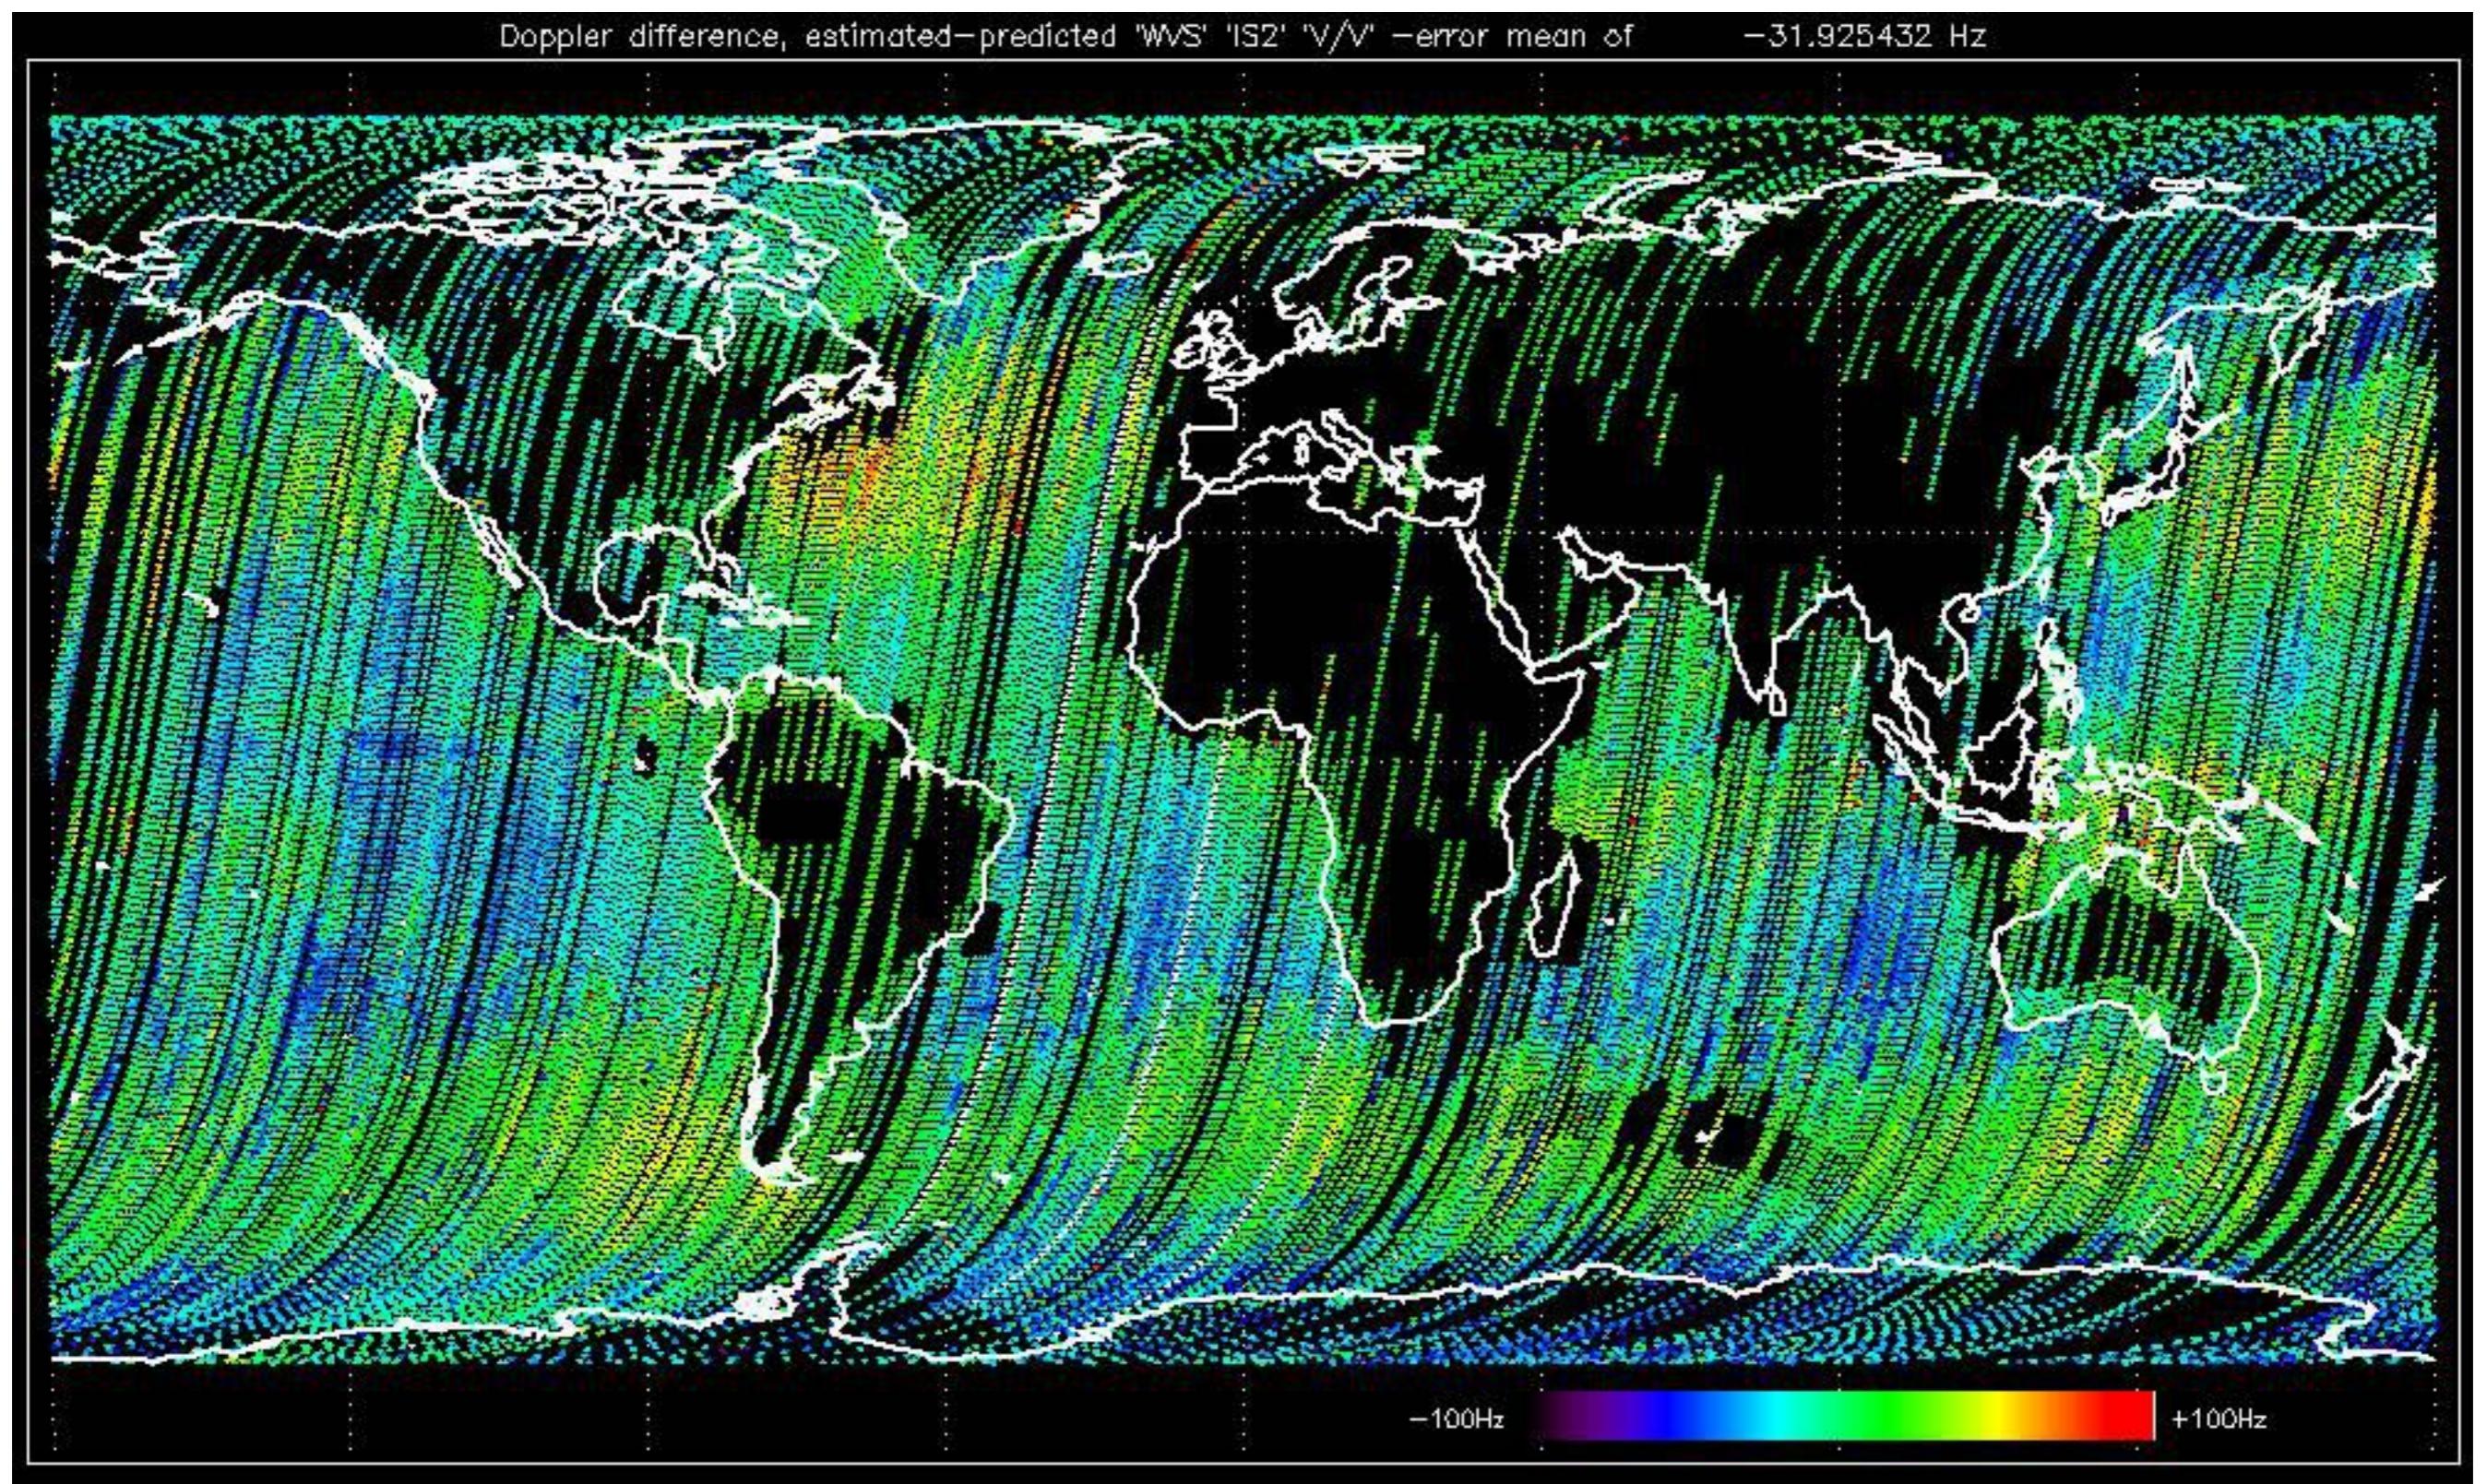

The MS mode provides an internal health check on an individual module basis.  
The purpose of this mode is to identify any malfunctionning modules and  
to identify modules for which calibration offsets are to be applied.  
No anomalies observed on last available MS products (08 Feb 2004).

No anomalies observed.
