1 - Introduction

This report is based on the analysis of wave mode level-1 cross spectra (ASA_WVS_1P), global monitoring products (ASA_GM1_1P), which are the available few hours after the acquisition, on the browse (BP) products and on the Module Stepping (MS) product.

2 - Summary

2.1 - Instrument Unavailability

No unavailabilities during the reported period.

2.2 - Browse Visual Inspection

No browse product available for the reported period.

2.3 - Data Analysis

-Stable wave internal calibration pulses gain and phase.

-Stable raw data statistics.

-Nominal Doppler behavior.

3 - Module Stepping Mode

The MS mode provides an internal health check on an individual module basis.

The purpose of this mode is to identify any malfunctionning modules and

to identify modules for which calibration offsets are to be applied.

No anomalies observed on available MS products:

A 10x32 grid showing a comparison between Reference and Test data. The grid has 10 rows and 32 columns. Rows are labeled A1 through A2 at the top, and E1 through E4 at the bottom. Columns are numbered 1 through 32 along the right edge. Colored cells indicate differences between the two datasets. Yellow cells represent changes in RxPhase or RxLevel. Red cells represent new data points. Black cells represent missing data in the Reference dataset.
