## 1 - Introduction

This report is based on the analysis of wave mode level-1 cross spectra (ASA\_WVS\_1P), global monitoring products (ASA\_GM1\_1P), which are the available few hours after the acquisition, on the browse (BP) products and on the Module Stepping (MS) product.

## 2 - Summary

### 2.1 - Instrument Unavailability

No unavailabilities during the reported period.

### 2.2 - Browse Visual Inspection

## 2.3 - Data Analysis

- Stable wave internal calibration pulses gain and phase.
- Stable raw data statistics.
- Nominal Doppler behavior.

## 3 - Module Stepping Mode

The MS mode provides an internal health check on an individual module basis.  
 The purpose of this mode is to identify any malfunctioning modules and  
 to identify modules for which calibration offsets are to be applied.  
 No anomalies observed on available MS products:

The figure consists of a grid of colored cells representing signal activity. The columns are labeled at the top with letters and numbers: A1, A3, B1, B3, C1, C3, D1, D3, E1, and E3. The rows are numbered vertically on the right side from 1 to 32. Yellow cells represent active signal periods, while black and red cells represent inactive periods. The pattern shows a repeating sequence of active and inactive states across the columns.
