1 EXECUTIVE SUMMARY

This document summarizes the instrument and product quality status as derived from data acquired during September 2005.

No major anomalies have been experienced during this period. The list of unavailability periods is provided in Chapter 2 together with details of any data disclaimers issued during the reporting period. Chapter 3 provides information on the background regional mission (BRM) planning. Details on the Doppler Centroid evolution are provided in chapter 4. Radiometric stability is measured by means of ASAR and Radarsat transponders. Detailed results are provided in chapter 5. An updated list of auxiliary data files is provided in chapters 6 and 7.

2 INSTRUMENT STATUS

No major anomalies experienced during the reporting period.

The following Antenna Transmit/Receive Modules (TRMs) have failed since launch:

- > TRM-01 to 04 in tile C1: H & V polarisation transmit failed since May 2002
- > TRM-01 to 04 in tile D2: H & V polarisation transmit and receive failed since 18th February 2003
- > TRM-14 in tile B2: H polarization transmit failed since 12th April 2004
- > TRM-15 in tile A1: failed to transmit in V polarization since 17th May 2004
- > TRM-06 in tile A1: failed to transmit in V polarization since 17th November 2004
- > TRM-12 in tile C4: failed to transmit in H polarization since 16th January 2005

Please note that a single TRM transmit failures have no significant impact on the instrument performance nor on the antenna pattern radiation shape. The impact of multiple TRM failures is mitigated by the generation of new antenna patterns.

2.1 Instrument Unavailability

The new events with respect to the previous report are given in the table below. Please note that the full unavailability list is available in Appendix A.

2.2 Data Disclaimer

A data quality disclaimer is issued each time that ASAR data of degraded quality is acquired between specific time intervals. Details on the available disclaimers are provided online at http://earth.esa.int/pcs/envisat/asar/disclaimer. Please note that the full disclaimer list is also available in Appendix B.

During September 2005 two new disclaimers have been issued:

• From 14-SEP-2005 08:00:40 to 16-SEP-2005 19:57:33 Problem Description:

Quality of ASAR Level-1 and Level-2 products is slightly degraded due to a temporal modification of the antenna radiation patterns. Due to an on board anomaly, data acquired during this period is affected by a change of the antenna radiation pattern. The overall quality of these data is degraded. Radiometric normalisation of level 1 products are clearly

corrupted, with significant residual antenna pattern modulation and differences from subswath to sub-swath in the ScanSAR cases (WS and GM).

Affected products:

All ASAR products, including level 0 products

• From 16-SEP-2005 19:57:33 to 14-OCT-2005 00:00:00

Problem Description:

Quality of ASAR Level-1 and Level-2 products acquired between 16-09-2005 19:57:33 UTC and 14-10-2005 00:00:00 is slightly degraded for NRT products while it is nominal products generated on-request after 14-10-2005 00:00:00. Quality of products acquired after 14-10-2005 00:00:00 is nominal.

Affected products:

All ASAR level 1 and level 2 products

4 DOPPLER MONITORING

The Envisat Orbit Control Manoeuvres (OCM) can affect the platform attitude stability even a hours after the burst with a direct impact on the Doppler centroid frequency evolution. An updated list of the OCM can be found at http://nng.esoc.esa.de/envisat/ENVmano.html.

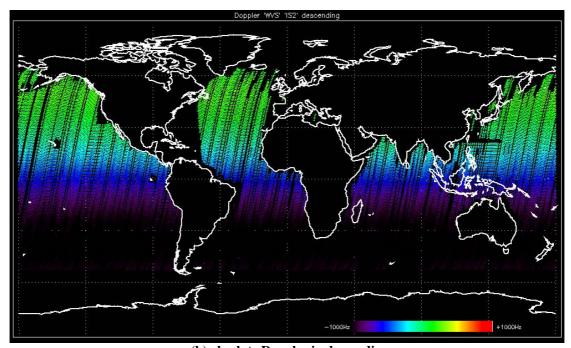

The plots of the figure 1 and figure 2 show the evolution of the Doppler centroid over the world for the 35 days prior to the end of the reporting period. No anomaly on the Doppler centroid distribution is noticed.

5 IRF ANALYSIS

The analysis of the ASAR and Radarsat transponders is used to characterise ASAR products in term of:

- ✓ spatial resolution,
- ✓ Impulse Response Function (IRF) parameters (ISLR, PSLR, SSLR) and
- ✓ Absolute calibration factor.

The analysis is performed for all the modes, beams and polarisations.

The Table 1 shows the relative Radar Cross Section (RCS)¹ per mode, beam and set of transponders. The values provided per sub-swath correspond to the mean absolute calibration error. Values provided per all swaths correspond to the mean error value and the corresponding standard deviation. All values are in dB.

6.2 History of Elevation Antenna Pattern Updates

The table below summarizes the evolution of the elevation antenna pattern used for processing since August 2002. The files are available on line at http://earth.esa.int/services/auxiliary_data/asar/.

The source information indicates whether the pattern has been derived from data acquired over the Rain Forest ("RF") or whether it has been derived from antenna synthesis using results from Module Stepping acquisitions ("SYN").

Please note that pre-launch antenna pattern where used before the first ASA_XCA_AX update.

Please note that the table indicates for each beam, in which file the update took place. Any file created after this date will include that update unless a new file is specified for the beam. For instance, the pattern for IS3_SS2 VV was updated on 27 August 2003. The file created on 9 December 2003 (when the IS1 VV pattern was updated) will include the same pattern for IS3_SS2 VV as in the file of 27 August 2003, since the table does no indicate any further update for the IS3_SS2 VV pattern.
