1 INTRODUCTION

The MERIS Cyclic Report is distributed by ESRIN- DPQC (Data Processing Quality Control) to keep the MERIS Community informed of any modification regarding the processor, updates of auxiliary products, anomalies of the instrument behaviour, data acquisition and processing, and finally the status of the calibration, validation, and quality control activities. The Cyclic Report collects the inputs coming from different groups involved in MERIS data exploitation:

- ESRIN- Product Control Facility (PCF)
- Quality Working Group (QWG)
- MERIS/AATSR validation team (MAVT)
- Brockmann Consult (BC)
- ACRI-st
- Laboratoire d'Océanographie de Villefranche (LOV)
- Centre National d'Études Spatiales (CNES)
- Frei Universitat Berlin (FUB)
- Laboratoire Interdisciplinaire en Sciences de l'Environnement (LISE)

The main objective of the Cyclic Report is to provide the users community with useful information regarding the instrument performances, the data production chain, the results of calibration activities and validation campaigns, at the end of each ENVISAT cycle, which represents 501 orbits, about 35 days.

2 SUMMARY

Cycle #54 starts on the 18^{th} December 2006 and stops on the 22^{nd} January 2007 .

- A diffuser Ageing calibration, a Wavelength Type 1 calibration as well as two Radiometric clibrations were planned and successfully executed during cycle #54.
- No any new auxiliary files were disseminated during the reporting period.
- Three instrument unavailability periods occurred during the reporting period. The longest period of unavailability lasted more than six hours.
- One data unavailability period occurred during the reporting period.

Details about the start and stop of the cycle can be found in Table 1.

Cycle number	54
Start time	18^{th} December 2006, 21:59:29
Stop time	22^{nd} January 2007, 21:59:29
Start orbit	25105
Stop orbit	25605

3 PROCESSOR VERSION AND PROCESSING CONFIGURATION

3.1 MERIS Processor Release

No changes in the IPF have been performed during cycle #54. The current MERIS processor configuration is described in Table 2.

IPF	Validity	Reference Documents

Table 5: MERIS Level 2 Auxiliary Data Files

3.4 Configuration Table Interface (CTI)

No any new CTI was disseminated during cycle#54.

3.5 Level 1 / Level 2 RR or FR products

During cycle #54 neither format changes nor algorithm modifications regarding MERIS RR and FR products were implemented into the operational processor.

REMINDER:

In the middle of cycle #47, some format changes or algorithm modifications regarding MERIS

RR and FR products were implemented during the operational processor upgrade from v4.10 to 5.02. The data changes decided within the Data Quality Working Group are listed below:

- ⊳ New Chlorophyll 1 polynomial characterisation from LOV (Laboratoire d'Océanologie de Villefranche - France)
- ▷ Chlorophyll 1 validity range set to [0.01, 30.], no PCD raise when out of range
- \triangleright Troposphere-free MAR99 replaces BLUE <= 1.5 (from previous BOMEM runs)
- ▷ Gothic R Look Up Table from LOV (Laboratoire d'Océanologie de Villefranche France)
- ▷ Chlorophyll 2 conversion factors from GKSS (revised with latest Neural Network delivery)
- > Yellow Substance coding offset and scaling factor changes (linear to log scale, same range)
- \triangleright Chlorophyll coding range changes ([-2,2] in \log_{10} scale instead of [-3,3] previously)
- \triangleright Whitecaps threshold set to 10 m.s⁻¹
- ▶ New Case 2 Neural Network from GKSS (with and without linear reflectances as input)
- ▶ White scatterer threshold set to 4.8
- \triangleright MTCI threshold on B13-B8 difference set to 0.05, on B10-B8 to $1e^{-6}$ (numerical purpose only), ceiling for B8 set to 0.3, floor for B9 to 0.1
- ▶ Preliminary version of LARS Look Up Tables from Hygeos

For further details concerning the changes, please refer to the documentation available at: http://earth.esa.int/pcs/envisat/meris/documentation/MERIS_IPF_evolution.pdf

4 PDS STATUS

The statistics resulting from the query to the PDS inventory facility (INV) for the MERIS products availability are presented in the following paragraphs.

4.1 MERIS Level 0 products availability

Table 6 shows the statistics regarding the RR L0 availability (compared to the planned production).

Week	MER_RR	0P %
	Inventoried	Missing
From 18/12 to 25/12	92.85	7.15
From 25/12 to 01/01	97.74	2.15
From 01/01 to 08/01	77.00	23.00
From 08/01 to 15/01	99.43	0.57
From 15/01 to 22/01	99.98	0.02

Table 6: Reduced Resolution Level 0 products availability

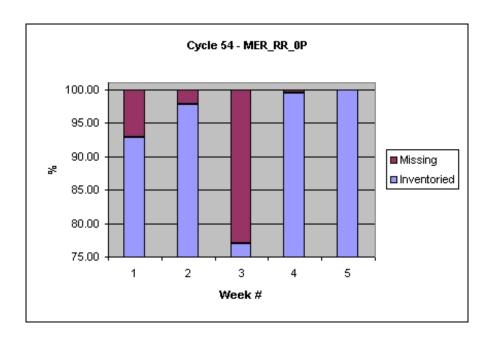

Figure 1: MER_RR__0P generated/missing by the ground segment during cycle #54

Table 7 shows the statistics regarding the FR L0 availability (compared to the planned production).

Week	MER_RR	0P %
	Inventoried	Missing
From 18/12 to 25/12	89.97	10.03
From 25/12 to 01/01	87.58	12.23
From 01/01 to 08/01	91.74	8.26
From 08/01 to 15/01	98.73	1.27
From 15/01 to 22/01	99.08	0.92

Table 7: Full Resolution Level 0 products availability

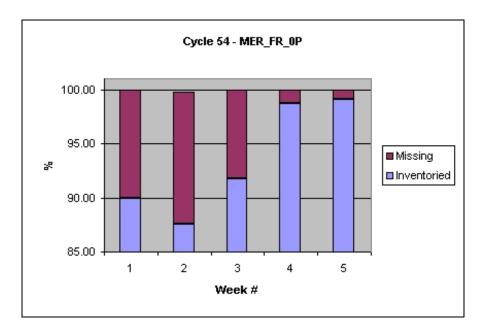

Figure 2: MER_FR__0P generated/missing by the ground segment during cycle #54

4.2 MERIS FR acquisitions

The pictures below (Figure 3, Figure 4, Figure 5, Figure 6, Figure 7, Figure 8 and Figure 9) show the MERIS Full Resolution global coverage for the reporting period. As specified for this type of MERIS products, all lands and coastal areas are covered by MERIS FR acquisitions.

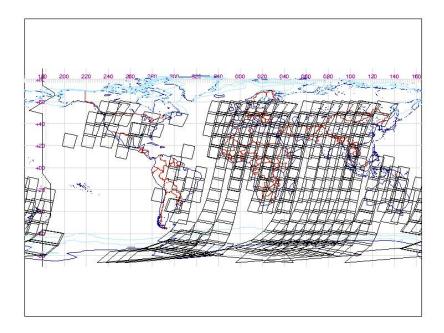

Figure 3: MERIS Full Resolution Level 0 acquisitions - Part #1 - 19/12/2006 - 23/12/2006

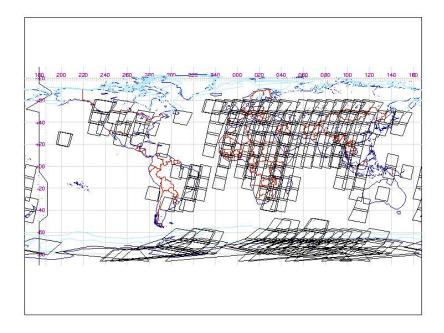

Figure 4: MERIS Full Resolution Level 0 acquisitions - Part #2 - 24/12/2006 - 28/12/2006

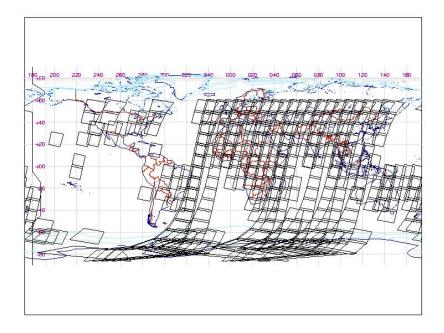

Figure 8: MERIS Full Resolution Level 0 acquisitions - Part #6 - 13/01/2007 - 17/01/2007

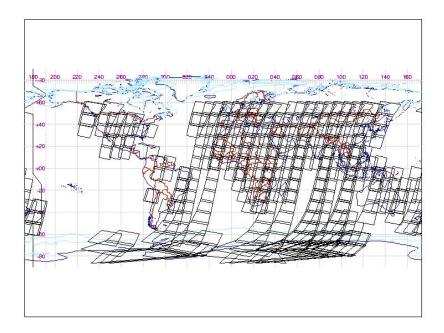

Figure 9: MERIS Full Resolution Level 0 acquisitions - Part #7 - 18/01/2007 - 22/01/2007

4.3 MER CA 0P Products

During the Cycle #54, the following calibration campaigns were successfully executed:

- \triangleright A Diffuser Ageing calibration was executed in orbits #25258-25259 (29^th of December).
- \triangleright A Wavelength Type 1 calibration was executed in orbits #25260 to #25261 (29th of December). This calibration required MERIS in Stabilization Mode during Region 1.
- \triangleright A Radiometric Calibration was executed in orbit #25263 (29th of December 2006).
- \triangleright A Radiometric Calibration was executed on doy 012 (Friday the 12th of January 2007) at 23.32.11z during orbit #25463.

The list of corresponding available calibration files is reported in Table 8.

5 INSTRUMENT/DATA UNAVAILABILITY

5.1 Instrument Unavailability

The following instrument unavailability has been reported during cycle #54:

• MERIS SDPSS unexpectedly switched to PAUSE mode From 20^{th} Jan 2007 20:28:53.000. It came back in acquisition at 20.29.25. (Day of Year = 020 Orbit = 25576 Anx Offset = 2843To 20 Jan 2007 20:29:25.000 Day of Year = 020 Orbit = 25576 Anx Offset = 2875). As a result 32" of data loss occured.

In the reporting period, 60 EDAC-corrected SEU occurred. The dates, times and geolocation of these events are given in the table below:

${f Date/Time}$	Lon.	Lat.
year.day.hr.mn.sc

5.2 Data Unavailability

The following data Unavailabilty related either to Envisat or Artemis were reported during cycle #54

- At 2006.362.00.07.17z, ARTEMIS triggered a spurious anomaly Level2A, which disconnected the APC from the bus. The APC has been reset and put back operative at 2006.362.00:22:56z (without harmonic compensation). At 2006.362.06.31.00z, ARTEMIS returned to his nominal operation with harmonic compensation activated.
- At 2006.362.13.04.25z, ARTEMIS triggered a spurious anomaly on the APC, which went into EMERGENCY mode. The APC has been reset and put back operative at 13:55:00z.
- At 2007.013.02.22.29z, ARTEMIS triggered a spurious anomaly on the APC, which went into READY NO-AUTO mode. The APC has been reset and put back operative at 02:46:58z.

6 CALIBRATION AND INSTRUMENT CHARACTER-IZATION

6.1 Calibration

6.1.1 Radiometric calibration

Cycle #54, potential radiometric calibrations are detailed in subsection 4.3 page 13.

6.1.2 Spectral calibration

Cycle #54, potential spectral calibrations (Wavelength Type 1 or 2) are detailed in subsection 4.3 page 13.

6.1.3 Geolocation

The accuracy specification for MERIS geolocation is 2000 m, with an operational goal of 150 m. The 290 m (nadir) bands 2, 5, 8 are used to estimate the absolute geolocation accuracy. This analysis shows significant improvements since launch, with one major upgrade, which occurred in 2003 DOY (Day of Year) 343. The update of the star tracker has been performed to reduce the systematic offset and improve orientation parameters. Global absolute geolocation error (North and South hemispheres) for the three consecutive periods can be summarized as follow:

- (I) Initially, after the launch, according to results related to the 2002 period, the geolocation accuracy is in the order of ± 135 metres along-track and ± 207 metres across-track. The RMS absolute geolocation error stays within the range of 251.24 ± 81 m.
- (II) The 2003 period is characterised by a degradation of the absolute geolocation accuracy where error is around ± 209 metres along-track and ± 295 metres across-track. For this period, the RMS absolute geolocation error stays within the range of 368.39 ± 67 m.
- (III) After the update, 2004 period, MERIS geolocation is achieving the goal of 300 m with accuracy of ± 132 m along-track and ± 165 m across-track. The RMS absolute geolocation error remains within the range of 212 ± 22 m.

When correcting products from the systematic offset (centred results), for 2004 period the RMS absolute geolocation error stays within the range of 166 ± 18 m. The amount of products located on northern hemisphere is much larger than the one from the Southern hemisphere. Comparison between the two sets of results is not trivial. For the 2004 period, this study demonstrated the temporal stability of the absolute geolocation. More results are now needed to confirm this trend. For more details, refer to the Gael Consultant (Fr) report available on the ESA website: http://earth.esa.int/pcs/envisat/meris/reports/

6.1.4 VEU Temperature Analysis

During one of the operation modes of MERIS, Stabilization mode, a thermal regulation of VEU (Video Electronic Unit) unit is performed in order to stabilise its temperature to reach full performances and insure a safe transition towards Observation and Calibration modes. During observation, the VEU Temperature has to remain in the operational acceptance temperature

range $-10^{\circ}/+50^{\circ}$ in order to meet the image quality requirements. The VEU temperature should be maximum +/- 10° C different from the last radiometric calibration for optimum performance.

During cycle #54, one could observe two temperature increases, respectively the 24/12/2006 and the 29/12/2006 as seen in Figure 10. The biggest one occured the 24/12/2006 as shown on the zoom in Figure 11. That day one could register a temperature of nearly 36°C. The fact is that on the 24^{th} of December 2006, MERIS stayed in $Dir\mathcal{E}Avg$ mode¹ during the complete orbit and did not switch to Heater mode during eclipse. This anomaly was due to a controlling problem on ENVISAT spacecraft. The consequence was this little VEU temperature increase. According to the spacecraft manufacturer², one cannot foresee any consequences on the MERIS instrument to dwell in acquisition mode if it only lasts the time of a single eclipse. As a matter of consequence one can deduce that the very little temperature increase that occurred the 29/12/2006 is also of no consequences.

6.1.5 Vicarious calibration results

For absolute calibration of MERIS by vicarious methods, METRIC2.0 tools are used to perform data extraction and spatial compression from MERIS Level1b products over specified sites following site type specific radiometric and geographic criteria. The child L1b products are ordered systematically on the basis of sites definition and mission analysis. Because the list of sites can be over-dimensioned and vary with season, it has a validity period of 3 months. Each L1b child product is submitted to METRIC with the correct version of auxiliary files MER_INS_AX and MER_CP1_AX used during its generation, and a dedicated resource file which stores all parameters necessary for data filtering (cloud and aerosol screening, distance from coast...). Metric generates one file for each selected site pertaining to the following categories, according to the potential use of the data in the calibration processing: Rayleigh, Glitter, Desert, Snow, and Buoy. Output files have HDF format. During cycle #24 new overpass tables have been regenerated for all sites of interest updating the relative orbits inside the cycle. The site map is shown in Figure 12.

METRIC Vicarious Calibration Sites

Figure 12: METRIC calibration site map

During the cycle Metric has generated for specific sites the results presented Table 10.

Latest results from these methods were presented at:

Second working meeting on MERIS and AATSR

Calibration and Geophysical Validation

MAVT-2006 ESRIN, Frascati, Italy

20-24 March 2006

Sites	#Products
DESERT	387
GLITTER	86
RAYLEIGH	0
SNOW	25
BUOY	87

Table 10: Specific sites results

Corresponding presentations can be found at:

http://envisat.esa.int/workshops/mavt_2006/MAVT-2006-0303_CTinel.pdf http://envisat.esa.int/workshops/mavt_2006/MAVT-2006-0304_CTinel.pdf

Note: in the same Workshop, other results of vicarious calibration for MERIS, not based on METRIC extraction, were also presented.

6.2 Instrument Characterization

6.2.1 Instrument degradation

No new results to be shown for cycle #54. For the last updates, refer to Cyclic Report #45 that can be found on the above-mentioned MERIS website (see subsubsection 6.1.3 page 16).

6.2.2 Diffuser ageing

No new results to be shown for cycle #54. For the last updates, refer to Cyclic Report #45 that can be found on the above-mentioned MERIS website.

6.2.3 Smile Effect

No new results to be shown for cycle #54. For the last updates, refer to Cyclic Report #23 that can be found on the above-mentioned MERIS website.

6.2.4 Spectral evolution from erbium measurements

No new results to be shown for cycle #54. Please refer to Cyclic Report #23 that can be found on the above-mentioned MERIS website.

7 DATA QUALITY CONTROL

7.1 MERIS products quality status

IPF version 5.02 did not have any impact on the MERIS products quality; an increase of the Level 2 processing time has been reported - it is linked to the increase of the number of pixels taken into account for the retrieval of aerosols over land, and the more detailed aerosols Look Up Table.

7.2 Anomalies and Software Problem Reporting (SPR)

Blank records have been identified in some MERIS products rejected by visual inspections using the AMALFI system. These black lines crossing the track are a nominal behavior of the processor, which replaces missing or corrupted Instrument Source Packets (ISPs) with blank data to preserve the geographical consistency of the scene.

8 FIRST 2003 MERIS ARCHIVE REPROCESSING

Information concerning the 1st reprocessing of the 2003 MERIS data archive done spring 2004 can be found on the MERIS website:

http://earth.esa.int/pcs/envisat/meris/documentation/First_2003_MERIS_Reprocessing.pdf. The document explains also how to get the reprocessed data.

9 SECOND 2005 MERIS ARCHIVE REPROCESSING

Following the recommendations of the Data Quality Working Group and the Science Advisory Group, improvements to MERIS processing resulted in version 7.4 of the off-line processor MEGS. It is currently being used for a complete reprocessing of the MERIS Reduced Resolution data archive. The corresponding time period extends from June 2002 to June 2005. 2003 and 2004 data will be made available through the MERCI (MERIS Catalogue and Inventory) service by the end of year 2005. For further information see: http://envisat.esa.int/services/catalogues.html

10 MERIS PROCESSOR EVOLUTION

A detailed description of the MERIS IPF evolution since March 2002 until present, in terms of data format changes and algorithm modifications, can be found on the MERIS website: http://earth.esa.int/pcs/envisat/meris/documentation/MERIS_IPF_evolution.pdf

11 VALIDATION ACTIVITIES AND RESULTS

The presentations given at the MAVT-2006 yield at ESRIN premises, Frascati, Italy, from 20 to 24 March 2006 are now available at the following address: http://envisat.esa.int/workshops/mavt_2006/

12 WATER VAPOUR AND BROWSE MAPS

Water Vapour data, retrieved from MER_LRC_2P products, have been used to generate global coverage maps for each day of the cycle. Maps are available on the ESA website: http://earth.esa.int/pcs/envisat/meris/maps/watervapour/.

MERIS tracks for each day of the cycle have been plotted using Browse products. Maps are available on the ESA website: http://earth.esa.int/pcs/envisat/meris/maps/browse/

13 HOW TO GET MERIS DATA

Information concerning the different ways to access the MERIS data can be found on the MERIS website:

http://earth.esa.int/pcs/envisat/meris/documentation/Access_to_MERIS_data.pdf

14 GENERAL INFORMATION

- 1. The European Space Agency organised a joint MERIS and (A)ATSR workshop, held at ESRIN, Frascati, Italy, on 26-30 September 2005. All information about the objectives of the workshop as well as the participants' presentations can be found on ESA's official page: http://envisat.esa.int/workshops/meris_aatsr2005/
- 2. The European Space Agency organised the second working meeting on MERIS and AATSR Calibration and Geophysical Validation (MAVT-2006) in ESRIN, Frascati, Italy, from 20 to 24 March 2006. All information about the objectives of the workshop as well as the participants' presentations can be found on ESA's official pages: http://www.congrex.nl/06M07
