## MIPAS maps of mean distribution: 29-MAR-2012

Measurement Mode: Upper Atmosphere (42 - 172 km)

Processor version: MI PAS/5.06-N

### Note to users

The following filtering criteria were applied: non convergent profiles or retrievals with chi-2 exceeding a predefined limit are removed from the maps.

The filtering criteria are explained in the Readme file for V5, available [here](#).

Statistics on filtered profiles for each target parameter are provided in the table below.

The retrieved geo-physical products are interpolated at different Teta levels.

The data is then interpolated to a fixed Lat/Lon grid using a weighted distance average.

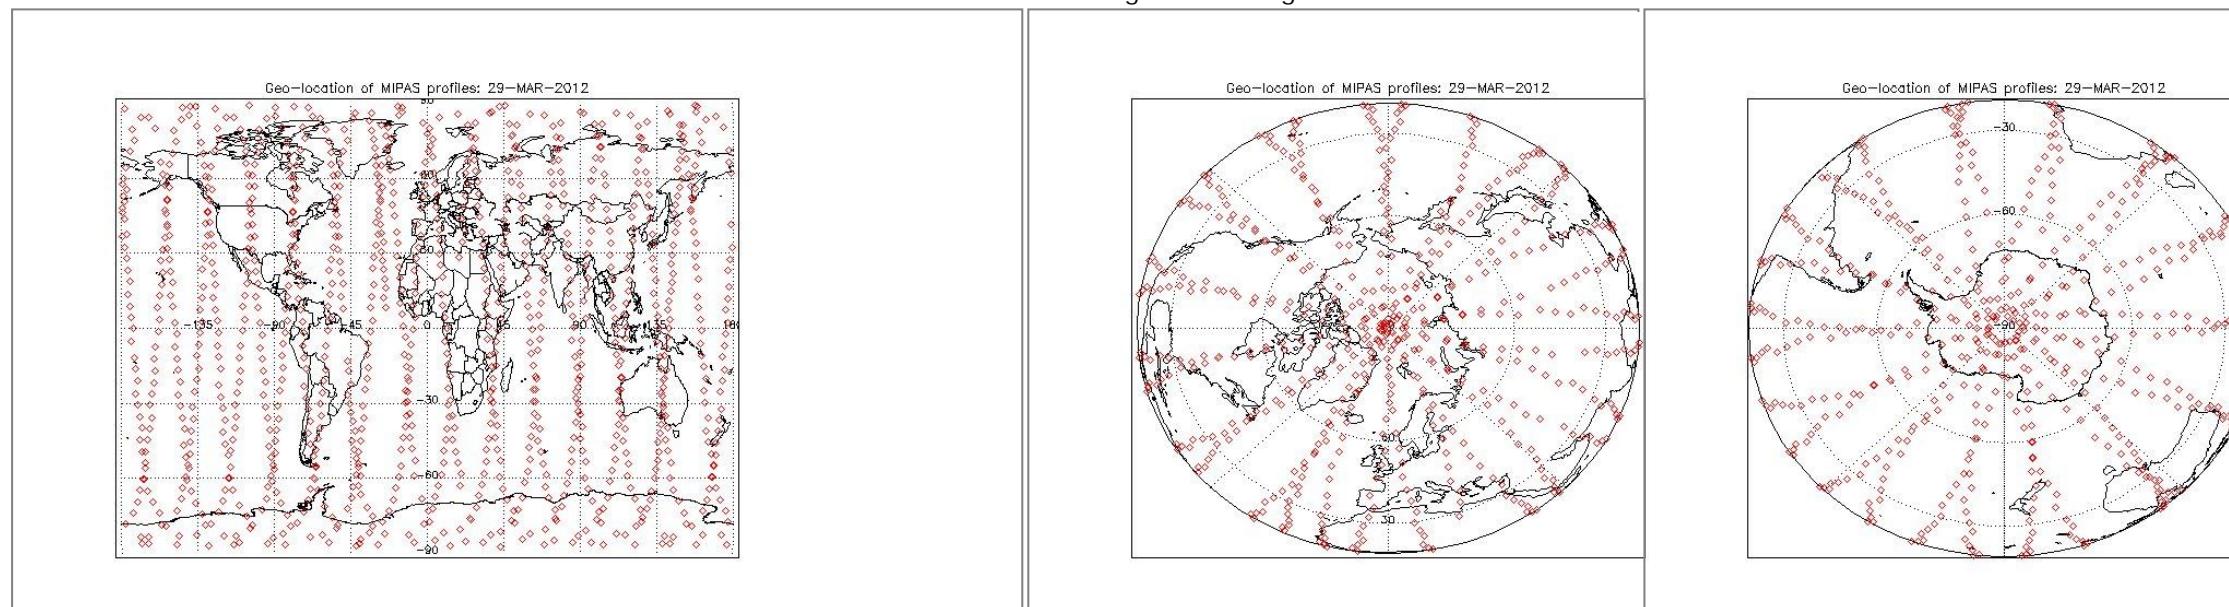

Note that Upper and Middle Atmosphere measurements are only retrieved up to 70km.

Total Number of profiles: 1069

Retrieved Parameter	Profiles not reaching convergence (%)	Profiles exceeding chi2 threshold (%)
p-T	12.16	0.19
H2O	12.16	0.09
O3	12.16	0.28
HNO3	92.42	0.09
CH4	12.25	0.09
N2O	13.56	0.09
NO2	12.25	0.09
