

Weekly Results from 19th May until 26th May 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report. The Scatterometer data gaps are related with the orbits dumped at Maspalomas and Gatineau station.

During the report period only few orbits are available. The reason is the large period of AMI unavailability started on 19th May 2002 and lasted until 24th May 2002.

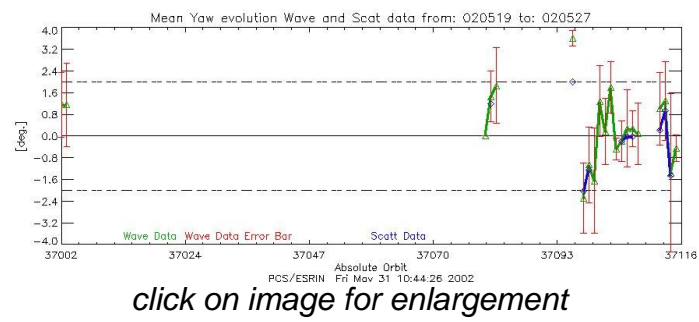

Figure 1 Mean Yaw Evolution from Wave (green) and Scatterometer Data (blue)
