

# Weekly Results from 15<sup>th</sup> September to 23<sup>th</sup> September 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report. During the reporting period the mean yaw was stable within [-2.0, +2.0] degrees. That results are similar to the one reported last week. As usual, good agreement between wave and Scatterometer results.
