

Weekly Results from 22nd September to 28th September 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report. The mean yaw evolution was stable within [-2.0, +2.0] degrees during the reporting. One can note a negative bias on Sunday 28 September 2002, orbit 38898 certainly due to changes on solar activity.

No Scatterometer results due to technical problems from PCS side.
