

Weekly Results from 06th October to 13th October 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report. The mean yaw evolution was stable within $[-2.0, +2.0]$ degrees during the reporting. One can note a large gap from orbit 39017 to 39023 due to missing data from Maspalomas ground station.

No Scatterometer results due to technical problems from PCS side.
