

Weekly Results from 15th October to 22nd October 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report.

The mean yaw evolution was stable within [-2.0, +2.0] degrees during the reporting. One can note a large yaw bias on orbit 39162 after a large uwa products data gap. Also to notice other small data gaps during the week Good agreement between SAR and SCATT measurements.

Good agreement between SAR and SCATT measurements.
