

# Weekly Results from 10<sup>th</sup> November to 18<sup>th</sup> November 2002

Figure 1 shows the evolution of the mean yaw (over one orbit) and its standard deviation for the period covered in this report.

During the reporting period the mean yaw was stable within [-2.0, +2.0] degrees. Note that a maneuver had occurred on 12-NOV-2002 that caused high variation on the yaw bias. That results are similar to the one reported last week.

Good agreement between SAR and SCATT measurements.
